This bulletin presents the migration indicators for Kent between Mid-year 2014 to Mid-year 2015 as published by the Office for National Statistics (ONS) in June and August 2016.

Net migration is the difference between the number of people who move into an area minus the number of people who move out of that area. A positive Net migration figure means that more people are moving in than are moving out.

- Between Mid-2014 and Mid-2015 Net migration to Kent was +12,000 which accounts for 83.7% of the increase in population that year.
- Net migration to Kent in 2014/15 accounts for 0.8% of the total population of +1.5million.
- The majority (48.9%) of migrants to Kent are aged 25 to 44.

Internal migrants are people who have moved from a different area within the UK for example from Surrey to Kent.

- Net Internal migration to Kent was +5,900 people which accounts for 0.4% of the total population.
- Kent attracts people from all over the UK but mainly from London and elsewhere in the South East.
- Almost a third (69.2%) of internal migrants to Kent are aged 25 to 44

International migrants are people who have moved to Kent from outside the UK.

- Net International migration to Kent was +6,500 people which accounts for 0.4% of the total population.
- Net International migration to Kent this year has passed the previous high point in Mid-2006 to Mid-2007 with +6,100 net international migrants.
- The majority (48.1%) of international migrants to Kent are aged under 24.

Introduction

Migration is the key component of population change for Kent and thus plays an important role in the county's population and economic profile. It is vital that the County Council has a good understanding of the level of migration to Kent and the characteristics of the migrants settling in the area to ensure that the appropriate services are planned and provided. Key policy themes for migration include employment and skills, health, education and community cohesion.

Unfortunately there is no single data set that provides the complete picture of migration flows and the characteristics of all migrants. This has made the task of estimating the number of migrants very difficult. In 2008 the Office for National Statistics (ONS) embarked upon a programme of work designed to improve the quality of existing sources of migration statistics. Despite improvements being made there is still no single data set that provides the complete picture of immigration, emigration and the resulting net migrant total.

The most recent migration data comes from the **Components of Population Change**, which are used to calculate the annual Mid-Year Population Estimates and were published 23 June 2016, and **The Local Migration Indicators** which were published 25 August 2016.

The Components of Population Change provide:-

- Total Internal migrants
- Total Long-term international migrants
- Internal and International migrants by age and sex
- Origin and destination of internal migrants

The Local Area Migration Indicators include-

- Short-term international migrant estimates
- Flag 4 GP registrations - data from the NHS Patient Register Data Service (PRDS) on the number of people registering with a doctor whose previous address was outside of the UK

Where possible, data for Kent, the South East region and England is presented to allow for comparison with the national picture. Data for the Kent local authority districts is also presented to help identify local areas which have higher or lower levels of migration.

All data is annual from Mid-year 2014 to Mid-year 2015.

Components of Population Change

Net migration

The Net migration figure is the difference between the number of people who move into an area minus the number of people who move out of that area. Also included in the net migration figure are “other changes” which are changes in special populations. The special populations are:

- Prisoners (including a ‘counter-adjustment’ for their area of previous residence);
- Home Armed Forces (including a ‘counter-adjustment’ for their area of previous residence);
- Foreign Armed Forces and their dependants
- Service Families Overseas (this is a ‘negative’ component reflecting people who would be usually resident in an area had they not moved overseas as part of this component).

Since 2002 Kent has seen a gradual increase in net migrants, as shown in Chart 1

Chart 1: Net migration and other changes in Kent – Mid-2001/02 to Mid-2014/15

Net migration has fluctuated considerably over the past twelve years. However, overall Kent has seen a positive growth in net migration, which means that there have been more people entering the county than there have been leaving. This contributes to the population growth of the county along with natural change (births and deaths).

Migration has been the key component of population change for Kent since 1993. In the last year, migration accounted for 83.7% of the population change in the county, which is significantly higher than the national average (64.9%). More information on how much migration contributes to Kent's changing population can be found in an additional Business development & Intelligence Statistical bulletin, ['What's causing Kent's population growth?'](#)

Net migration to the county reached a peak in Mid-2006 to Mid-2007 when Kent saw 15,000 net migrants in a single year. In the latest year there were 12,000 net migrants to Kent – a modest decrease since last year.

11 out of 12 Kent districts have seen net migration increase between 2008/09 up to and including 2014/15. Tunbridge Wells is the only local authority to have experienced minor decreases in net migration between 2012/13 and 2013/14, and again between 2014/15.

Table 1 presents the number of net migrants for each Kent district each year between Mid-2001 to Mid-2002 and Mid-2014 to Mid-2015.

Table 1: Net migration and other changes in Kent districts – Mid-2001/02 to Mid-2014/15

 Figures up to 2011 are based on revised data in light of the 2011 Census as at 13 May 2013. All figures are rounded to the nearest 100 so may not sum when added
 Table produced by Strategic Business Development & Intelligence, Kent County Council

Canterbury has continually received a high number of net migrants throughout the decade, reaching its highest level in 2011/12 with a net increase of +2,900 migrants. Between 2014/15 the total of net migrants in Canterbury has dropped to 2,600 people.

Further investigation has revealed that the increase in Canterbury is within the 20-24 age-group and is thus related to the student population. See Table 7 on page 15. However, the level of migration between 2008/09 is uncharacteristic of past trends and there is no explainable reason why net migration levels decreased so dramatically in that year.

Whilst migration numbers may look quite high, when put into context alongside the total population, migrant numbers make up a small proportion of the total population. During Mid-2014 to Mid-2015, net migrants accounted

for 0.8% of the total Kent population. This is higher than the proportion for both the South East and for England, both of which is 0.6%.

The proportion varies between each district, with migrants accounting for the largest proportion in Canterbury (1.6%) and the lowest proportion in Tunbridge Wells (-0.0%).

Table 2 presents the number of net migrants for each Kent district in Mid-2013 to Mid-2015 as a proportion of the total resident population.

Table 2: Net migrants as a proportion of the total population of each Kent district – Mid-2014 to Mid-2015

Table 2: Net migrants as a proportion of the total population of each Kent district 2014/15

	Total population mid-2014	Net migrants 2013/14	Migrants as % of total population
England	54,786,300	304,600	0.6%
South East	8,947,900	53,200	0.6%
Kent	1,524,700	12,000	0.8%

In-flows and out-flows of migrants

Important note regarding variation in net migrant totals

The net migrant totals presented in Chart 1 and Tables 1 and 2 include a count for asylum seekers and visitor switchers, (+9,800 for Kent). These are noted as 'other changes'. However, the flow data published by ONS excludes asylum seekers and visitor switchers. Visitor switchers are people who enter or leave the UK for a short visit (that is less than 12 months) but end up staying for more than a year. These people are visitors that become migrants and need to be added to the migration estimates. Therefore the net migration counts published in Chart 2 and Table 3 may differ slightly to the net migrant totals presented earlier

Whilst net figures show the overall volume of migrants in an area, they mask the turnover of population. For example, although net migration to Tunbridge

Wells' district was 100 in Mid-2014 to Mid-2015 there were more than 7,000 people moving in to and out of the area during that year. For this reason it is also useful to look at the in-flows and out-flows of migrants.

Chart 2 shows that Kent saw an in-flow of 92,000 migrants to the county in the year Mid-2014 to Mid-2015 whilst out-migration from the county was 79,600. This resulted in a Net number of 12,400 migrants.

Chart 2: In, out and net flow of migrants to Kent Mid-2003/4 to Mid-2014/15

Table 3 shows the in, out and net-flow of migrants for each Kent district annually from Mid- 2002/03 up to Mid-2014/15

Table produced by Strategic Business Development & Intelligence, Kent County Council. All figures rounded to the nearest 100 so may not sum when added

Type of migrant

Migrants are typically categorised into one of two types; an internal migrant or an international migrant. An internal migrant is someone who has moved from within the UK. An international migrant is someone who has moved from outside of the UK. It is important to understand the type of migrant settling in an area because it has an impact on the population of that area. The difference in language is the most obvious issue as well as international migrants requiring access to different services than internal migrants, i.e. interpreters.

International migrants in this section relate only to those who people who change their place of residence for at least 12 months. People who move to Kent from outside of the UK and who intend to stay for less than 12 months are excluded from the counts in this section.

Research-based short-term migration estimates which give an indication of how many migrants are staying for less than 12 months are presented separately on page 18. Internal migrant counts are for all migrant moves regardless of length of stay.

Important note regarding variation in net migrant totals

The migrant type data excludes asylum seekers and visitor switchers. Therefore the counts of internal and international migrants are consistent with the flow data presented on page 17 of this report but will differ to the totals presented in Chart 1 and Tables 1 and 2.

Net migrant totals by type of migrant

In Mid-2014 to Mid-2015 Kent saw a net increase of +12,400 migrants, with 6,500 net migrants originating from outside of the UK and 5,900 net migrants originating from elsewhere within the UK. Chart 3 presents the type of migrant for each Kent district for the most recent year.

Chart 3: Net internal and international migrants in Kent districts Mid-2014 to Mid-2015

Canterbury has the largest number of net international migrants (+1,500) of all Kent districts, accounting for 28% of the total of international migrants for Kent as a whole.

Between Mid-2014 and Mid-2015 half of Kent's local authorities saw a higher proportion of international migrants than internal migrants. (Ashford, Canterbury, Gravesham, Sevenoaks, Swale & Tunbridge Wells)

Dover is the only district in Kent to see an equal proportion of internal and international migrants.

Tunbridge Wells is the only district in Kent to have experienced a decline in internal migrants.

Tables 4a and 4b show the net number of internal and international migrants in each Kent district for the last ten years.

Table 4a: Net INTERNAL migrants to Kent districts – Mid-2004/05 to Mid-2014/15

Local authority	Number of people										
	2004/05	2005/06	2006/07	2007/08	2008/09	2009/10	2010/11	2011/12	2012/13	2013/14	2014/15

Table produced by Strategic Business Development & Intelligence, Kent County Council. All figures rounded to the nearest 100 so may not sum when added

Although the net figures for Kent districts show a relatively small number, or even zero, this does not mean that there are no migrants in the area.

There will be higher numbers of both internal and international migrants moving into and out of the area at a given time. It is just the net result of those moving in to the area minus those who are moving out is very small or even zero.

For this reason it is important to look at the in-flows and out-flows of international and internal migrants. This gives an indication of where numbers of migrants are particularly high. This is examined further in the next section.

In-flows and out-flows of migrants by type

Internal migration

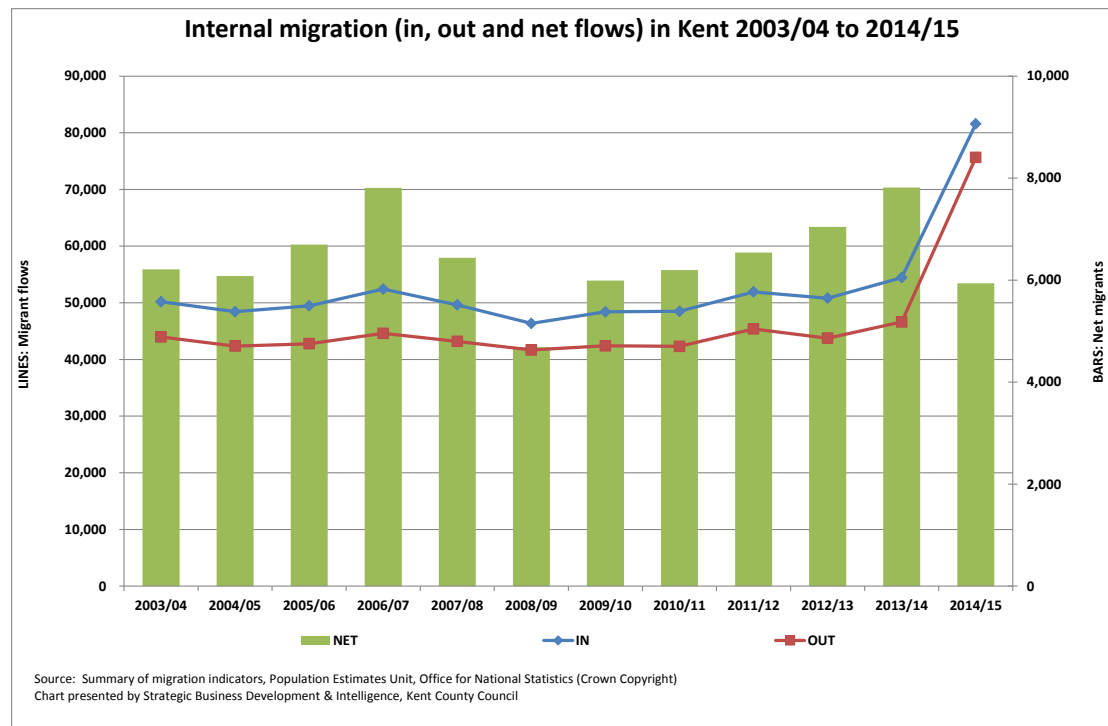

The flow of internal migrants is considerably higher than the flow of international migrants not only for the county as a whole but also for each Kent district.

Over the past eleven years the average annual number of people moving into Kent from elsewhere in the UK is 52,700 whilst the average number of people who leave Kent each year is 46,200.

In Mid-2014 to Mid-2015 Kent saw 81,600 internal migrants moving into Kent and 75,600 people moving out.

Chart 4 presents a time series of inflows, outflows and the net effect of internal migration for the KCC area since Mid-2003 to Mid-2004.

Chart 4: Internal migration flows for Kent – Mid-2003/4 to Mid-2014/15

Of all of the Kent local authority districts, Canterbury sees the highest flows of internal migrants, which is not surprising given its large student population which will turnover each year. Maidstone has consistently seen the second highest flows of internal migrants. Year-on-year Gravesham and Dover have seen the smallest flows of internal migrants.

International migration

Between Mid-2014 and Mid-2015, 10,400 international migrants moved into Kent whilst 3,900 moved out of the county.

Over the past eleven years the average annual number of people moving into Kent from outside the UK is 10,400 whilst the average number of people who leave Kent each year is 3,900.

Between Mid-2006 to Mid-2007 the number of international migrants arriving in Kent rose sharply to its highest point in the past decade. Kent saw the lowest number of international migrants arriving in Mid-2010 to Mid-2011.

Chart 5 presents a time series of inflows, outflows and the net effect of international migration for Kent since Mid-2003 to Mid-2004.

Chart 5: International migration flows for the KCC area – Mid-2003/04 to Mid-2014/15

Canterbury also sees the highest flows of international migrants. Again, this could partly be related to foreign students studying at university in Canterbury. As with the case of internal migrants, Maidstone has frequently seen the second highest flows of international migrants over the years whilst Shepway and Sevenoaks have consistently seen the lowest flows of international migrants. However, there has been some variation amongst Kent districts.

Tables 5a and 5b present the in and out-flows of internal and international migrants to each local authority district within Kent over the last twelve years.

Age profile of migrants to and from Kent

In the year ending June 2015 there were a total of 92,000 in-migrants to Kent and 79,600 out-migrants from Kent. The result was a net increase of 12,400 migrants. Table 6 illustrates the estimated age profile of migrants for the year Mid-2014 to Mid-2015.

Table produced by Strategic Business Development & Intelligence, Kent County Council

Numbers are rounded to the nearest 100 for presentation so may not sum when added. Percentages calculated using unrounded numbers

The majority of net migrants to Kent in the year Mid-2014 to Mid-2015 were aged 25-44 years old. This age group will add to the working age population of Kent. The 25-44 year old age group is also the main child bearing age group and possibly have young families therefore it is also likely that the second largest net increase of 4,200 0-15 year olds is linked to the net increase of 25-44 year olds

Kent sees a net outflow of 16-24 year olds to other parts of the UK. Table 6 shows that there are significant flows both into and out of the county of 16-24 year olds. However, there are more people in this age group leaving the county than entering. This profile is thought to reflect the movement of young people going to university or other forms of higher education. Traditionally more Kent residents study for higher education in establishments outside of the county. Detailed movements of graduates into and out of Kent are presented in [“The Graduates in Kent”](#) bulletin.

In Mid-2014 to Mid-2015 there was a net inflow of 1,300 people aged 65+ to the county. There is a perception that Kent’s coastal towns are attractive retirement destinations. An examination of the age profile of internal migrants

for Kent's local authority district's supports this as the larger net gains of people aged 65+ are in Canterbury, Dover, Shepway and Thanet

Table 7 presents the flow of total migrants by age group for each Kent district during the year Mid-2014 to Mid-2015. Please note that the district flow data includes flows between Kent districts.

Numbers are rounded to the nearest 100 for presentation so may not sum when added.

Age profiles of internal and international migrants in the Kent local authority districts are available upon request from research@kent.gov.uk

Origin and destination of Kent internal migrants

The majority of people who moved into Kent in the year ending June 2015 came from London. 23,300 people, equivalent to 43.6% of all in-migrants, came from the capital. In contrast, of all the people leaving Kent, 25.1% (11,900 people) moved to London. The result was a net gain of 11,400 people from London.

The rest of the South East is the second most popular origin of people moving in to Kent. 14,300 people from this area moved to Kent which accounts for 26.8% of all in-migrants to Kent in the year ending June 2015. However a total of 15,400 people left Kent for the rest of the South East. This figure accounts for 32.4% of all out-migrants from Kent and makes this region the most popular destination for people leaving Kent.

The net increase of internal migrants to Kent came from London. All other areas saw more people moving from Kent than people moving to Kent. The net loss of migrants was greatest to the South West region but in terms of actual numbers of migrants, most people from Kent moved elsewhere in the South East region.

Table 8 illustrates the origin and destination of Kent internal migrants in Mid-2014 to Mid-2015

Local Migration Indicators

Short-term international migration estimates (experimental statistics)

The international migration figures presented up until this point have been based on the ONS definition of a long-term migrant. This is someone who intends to stay for 12 months or more. It excludes all people who intend to stay for less than a year which are known as short-term migrants.

The figures shown in this section are from the International Passenger Survey and are estimates of short-term non-British migrants satisfying the United Nations definition of a short term migrant. These are annual figures from Mid-year to Mid-year and are only available from Mid-2007 to Mid-2008 up to Mid-2013 to Mid-2014 with the final year being provisional figures.

There were an estimated 3,700 short-term migrants in Kent during Mid-2013 to Mid-2014. This number is equivalent to a rate of 2.5 to every one thousand resident population for that year. This rate is lower than that of the South East (2.6) and lower than the rate for England (2.9).

The rate of short-term migrants per thousand resident population between Mid-2007 to Mid-2008 and Mid-2013 to Mid-2014 for Kent, the South East and England is presented in Chart 6.

Chart 6: Short-term international migrant rate per thousand resident population: Mid- 2007/08 to Mid-2013/4

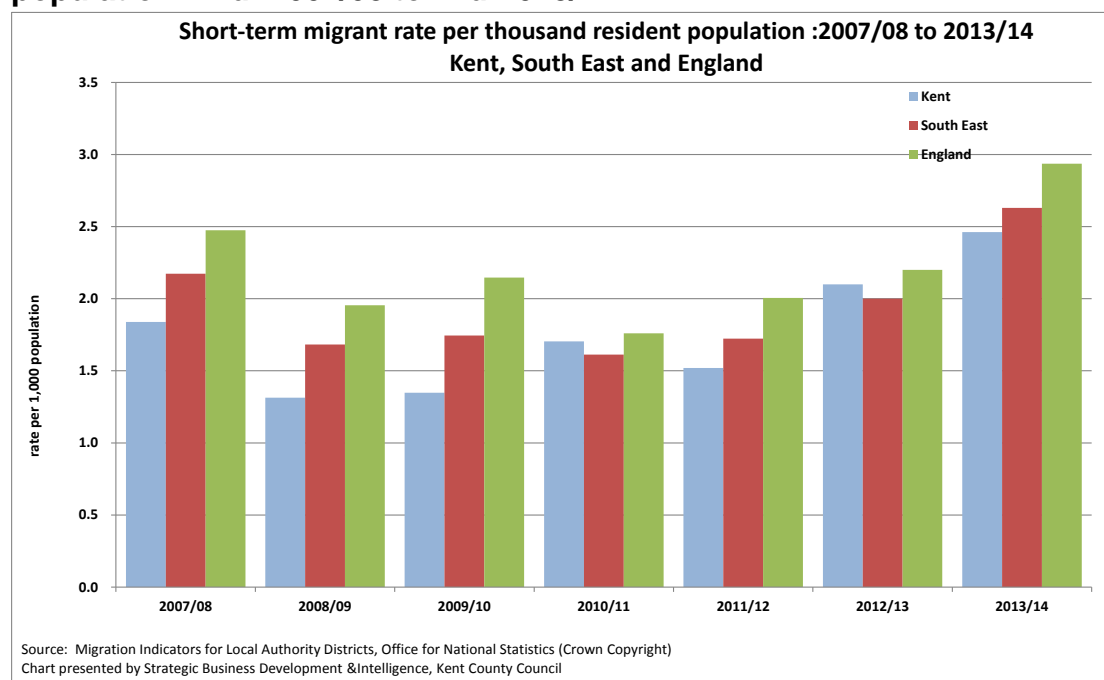

Table 10 presents the estimates and rates of short-term international migrants to England, the South East, Kent, and Local authorities in Kent between Mid-2007 to Mid-2008 and Mid-2013 to Mid-2014.

It is not surprising that the majority of Kent's short-term migrants are in the University City of Canterbury. Shepway continues to attract the smallest number of short term migrants.

Table produced by Strategic Business Development & Intelligence, Kent County Council.
All figures have been separately rounded to the nearest 100 so may not sum when added

Between Mid-2013 and Mid-2014 the majority of short-term migrants in Kent were here for employment. This is in contrast the England and the South East where the majority of short-term migrants give study as the main reason for migration.

Over the past seven years in Kent the split between short-term migration for employment and for study has fluctuated. Overall the main reason is employment but there have been two years where study has been by far the main reason for short-term migration in Kent. Mid-2008 to Mid-2009 and Mid-2010 to Mid-2011 saw the proportion of short-term migrants for study outweigh those here for employment.

Flag 4 GP Registrations

Flag 4 records are provided to ONS from the PRDS data provided by Health and Social Care Information Centre (HSCIC). Flag 4s are codes within the PRDS system which indicate that someone who has registered with a GP in England and Wales was previously living overseas.

A Flag 4 may be generated when an individual registers with a GP if:

- a) An individual was born outside the UK and enters England and Wales for the first time and registers with an NHS GP.
- b) An individual's registration will also generate a Flag 4 if the previous address of an individual is reported as outside the UK.

International in-migration records may not be retained on the patient register records through the person's subsequent migration within the UK. The patient register dataset is a "snapshot" taken annually. When an international in-migrant subsequently moves internally within the UK, and re-registers with a second GP, the "Flag 4" demarcation is not retained as the individual's last residence is now within the UK. If this internal migration occurs within the year of international in-migration, i.e. before the next mid-year "snapshot", the international in-migration will not be recorded.

Although the rate of Flag 4 GP registrations in Kent has always risen and fallen in line with the national and regional rates, the rate in Kent has consistently been lower than the South East and England rate

Between Mid-2014 to Mid-2015 there were 12,607 Flag4 GP registrations in Kent. This is equivalent to a rate of 8.3 per thousand population. This is the highest number of Flag4 GP registrations in Kent in the past ten years.

The rate of Flag4 GP registrations per thousand resident population for Kent, the South East and England for Mid-2003/04 to Mid-2014/15 is presented in Chart 7.

Chart 7: Flag 4 GP registrations per thousand resident population in Kent the South East and England Between Mid-2003/04 to Mid-2014/15

Within the Kent local authority districts, the rate of Flag 4 GP registrations during Mid-2014 and Mid-2015 was highest in Canterbury at 20.8 per thousand population. Canterbury has consistently had the highest rate of Flag4 GP registrations which is mainly due to the high number of students in the area.

During the year June 2014 to June 2015 Gravesham saw the second highest rate of 9.8 registrations per thousand population whilst Tonbridge & Malling experienced the lowest rate at 3.9

Table 12 provides the number and rate of Flag 4 GP registrations for Kent, the South East, England and all Kent local authority districts for each year from Mid-2003/04 up to Mid-2014/15.

Mid-year population estimates are rounded to the nearest 100 for presentation so may not sum when added

Table produced by Strategic Business Development & Intelligence, Kent County Council.

Conclusion

This bulletin has highlighted that migration plays an important role in Kent's population profile. In the twelve months between Mid-2014 and Mid-2015, Net migration accounted for 83.7% of the County's population growth. This is a higher proportion than England, which saw migration accounting for 64.9% of the total population change for Mid-2014 to Mid-2015.

Despite this, net migration accounted for less than 1% (0.8%) of Kent County's total mid-year population estimate for 2015 (1.5 million). Net migration in England as a whole accounted for 0.6% of the total mid-year population estimate for 2015 (54.8 million)

Each migration data set has its own strengths and weaknesses as has been outlined in this document. In the absence of one definitive data set, we will have to continue using a variety of data sets to provide a comprehensive picture of migration in Kent.
