[Kent facts and figures](#)

**This bulletin presents estimates of period life expectancy for males and females at birth and at age 65 in Kent as at 2021-2023. A 10-year time series of change is also presented.**

## Summary

- Males born in Kent between 2021/23 have a life expectancy of 79.31 years, whilst for females it is 83.34 years, 4.03 years longer than males. The England average is 79.11 years for males and 83.05 years for females, 3.94 years longer than males.
- Over the past ten years, life expectancy at birth in Kent has decreased for males by -0.52 years and for females by -0.19 years.
- Nationally, life expectancy at birth for males has decreased by -0.17 years and for females has increased by +0.04 over the last 10 years.
- In Kent, a male resident aged 65 between 2021/23 can expect to live another 18.67 years and for females another 21.28 years. The England average is 18.67 years for males and 21.14 years for females.
- Over the past ten years, life expectancy at age 65 in Kent has decreased for males by -0.11 years and increased for females by +0.02 years. Nationally, life expectancy at age 65 has increased by +0.14 years for males and by +0.13 years for females.

## Introduction

Life expectancy is the estimated number of years a person would be expected to survive if he or she continued to experience the area's mortality rate at that time throughout the rest of their life. The figures reflect mortality of those living in an area at that point in time rather than those born in the area.

All figures are three-year averages, produced by aggregating the number of deaths and mid-year population estimates across each three-year period. This provides large enough numbers to ensure that figures presented are sufficiently robust and eliminates any effects of extremely large numbers of births or deaths in any one year.

Two sets of figures are presented. Life expectancy at birth and life expectancy at age 65:

- Life expectancy at birth is the number of years a person living in an area could be expected to survive if they were to experience that area's mortality rates for all people for the rest of their life.
- Life expectancy at age 65 is the number of years a person aged 65 to 69 living in an area could expect to live if they were to experience that area's mortality rates for people aged 65 to 69. Therefore, if the life expectancy at birth of someone born in an area is 80 the life expectancy of a person aged 65 may exceed or fall lower than 15 years because the mortality rates applied are different.

## Life expectancy at birth

### English regions

A male born in England between 2021/23 has an estimated life expectancy of 79.11 years and a female born in the same period has an estimated life expectancy of 83.05 years. Life expectancy estimates vary across the regions by as much as 2.96 years for men and 2.71 years for women.

Babies born within the South East, the South West, East of England, and London, have greater life expectancies than the England average. The South East region has the highest male life expectancy (80.32 years), and London has the highest female life expectancy (84.13 years) of all the regions. The North East has the lowest life expectancy for males (77.36 years) and females (81.42 years) of all the regions.

Table 1 shows life expectancy at birth in years for males and females in England and the regions and shows the difference between males and females in each area.

**Table 1: Life expectancy at birth (years): England and the regions**

Region	Males	Females	Difference
<b>South East</b>	<b>80.32</b>	<b>84.06</b>	<b>3.74</b>
South West	80.07	83.99	3.92
East of England	79.99	83.64	3.65
London	79.83	84.13	4.30
<b>England</b>	<b>79.11</b>	<b>83.05</b>	<b>3.94</b>
East Midlands	78.75	82.59	3.84
West Midlands	78.38	82.47	4.09
Yorkshire & The Humber	78.13	82.09	3.96
North West	77.52	81.60	4.08
North East	77.36	81.42	4.06

Table ranked on male life expectancy

## South East counties

Within the counties in the South East region, there are further variations in life expectancy at birth. There is a difference of 2.22 years between the highest and lowest life expectancy for males and 1.65 years difference between the highest and lowest life expectancy for females.

Surrey has the highest life expectancy for both males and females born between 2021/23 at 81.53 years and 84.99 years, respectively. In Kent, males have a life expectancy of 79.31 years and females have a life expectancy of 83.34 years.

Although both Kent figures are slightly higher than the national figure, they rank lowest out of all the counties within the South East region.

Table 2 overleaf shows life expectancy at birth in years for males and females in South East counties and shows the difference between males and females in each area.

**Table 2: Life expectancy at birth (years): South East counties**

County	Males	Females	Difference
Surrey	81.53	84.99	3.46
Oxfordshire	81.31	84.89	3.58
Hampshire	81.30	84.60	3.30
West Sussex	80.36	84.36	4.00
East Sussex	79.90	83.43	3.53
<b>Kent</b>	<b>79.31</b>	<b>83.34</b>	<b>4.03</b>

Table ranked on male life expectancy

## English Local Authority Districts

Within the English local authority districts and unitary authorities, the difference between the highest and lowest male life expectancy at birth is 10.30 years. Hart local authority in Hampshire, has the highest with 83.44 years and Blackpool Unitary Authority in the North West, has the lowest with 73.14 years.

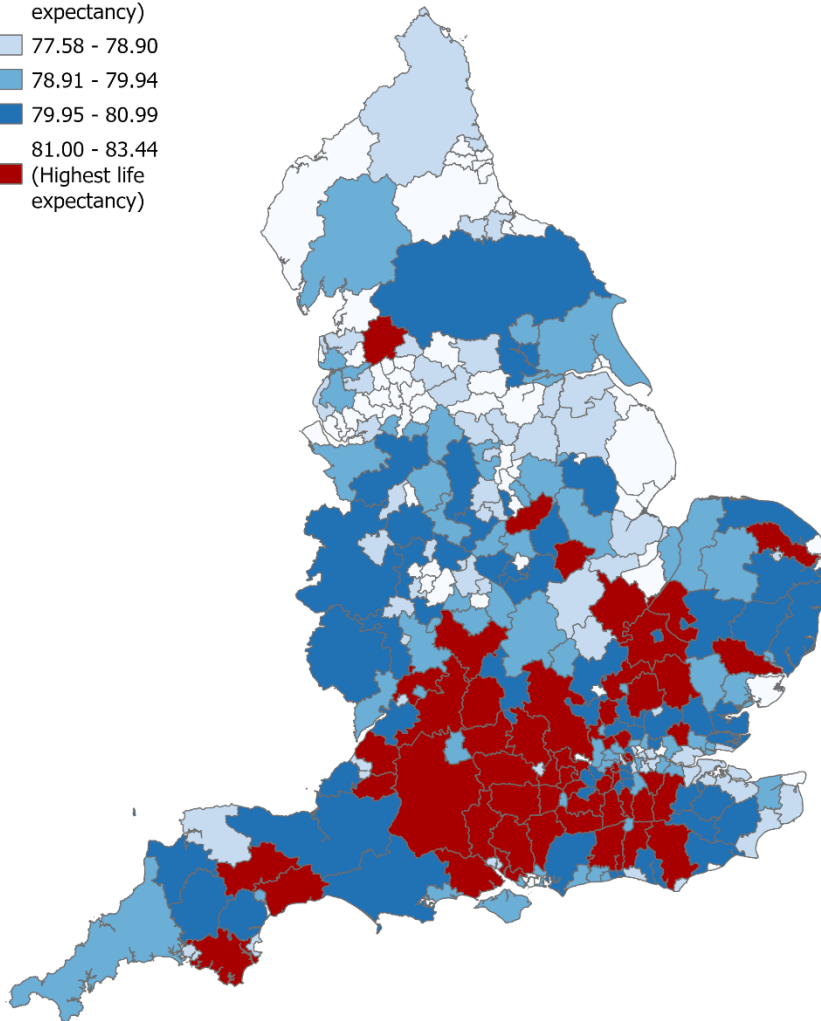

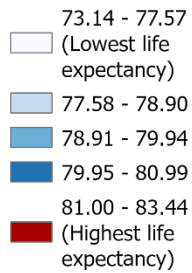

The difference between the highest and lowest female life expectancy is 7.53 years. Kensington & Chelsea, in London, has the highest with 86.46 years and Blackpool in the North West, has the lowest with 78.93 years.

Maps 1 and 2 show male and female life expectancy at birth in local authorities in England. A table showing male and female life expectancy at birth in all English local authorities can be found in Annex 1 at the end of this bulletin.

Within Kent local authority districts the difference between the highest and the lowest male life expectancy at birth is 4.32 years and for females at birth is 2.85 years.

Although the range between the highest and lowest life expectancy within Kent is smaller than that for England, Kent has areas which fall within the 20% highest and lowest life expectancy in England (81.00 years or more, and 77.57 years or less for males and 84.61 years or more, and 81.73 years or less for females) . Sevenoaks is in the 20% of areas with the highest male and female life expectancy at birth. Thanet is in the 20% of areas with the lowest male life expectancy at birth whereas no Kent districts are in the 20% of areas with the lowest female life expectancy at birth.

Maps 3 and 4 show male and female life expectancy at birth in local authorities in Kent. Whether Kent districts have lower or higher life expectancy is in comparison to all other local authorities in England.

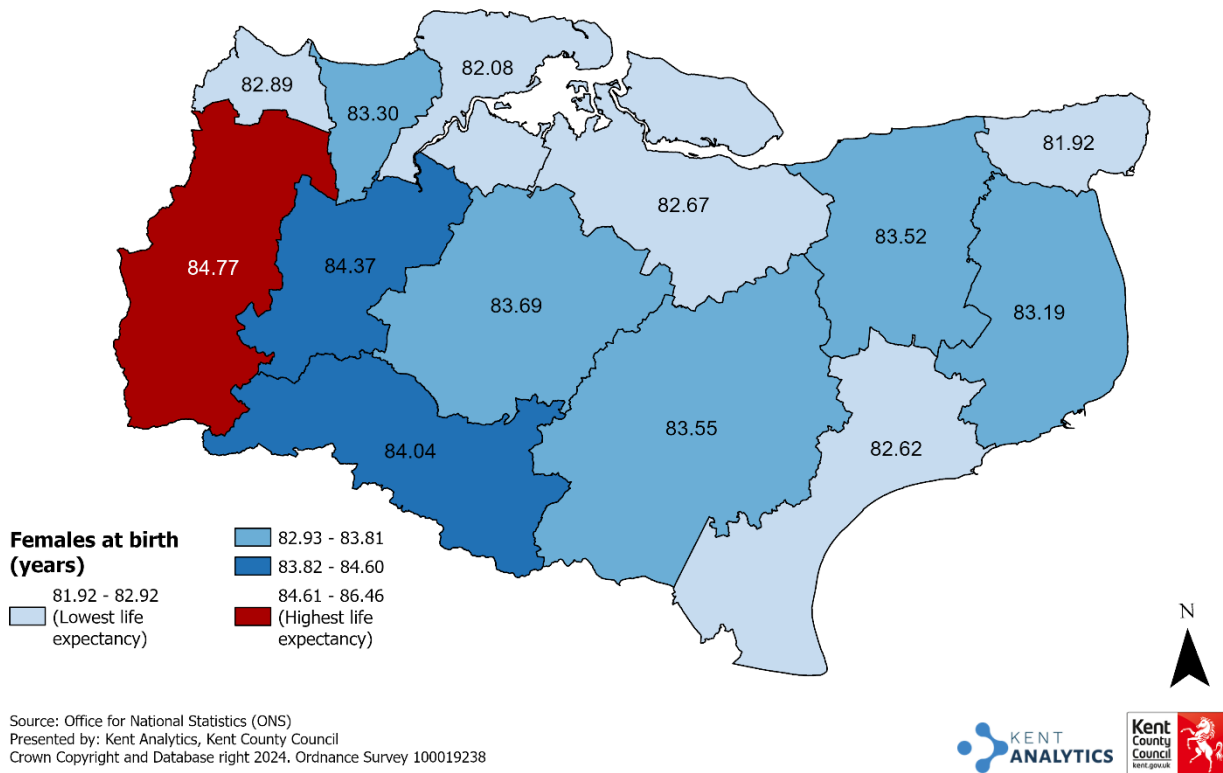

### Map 3: Male life expectancy at birth 2021-23: Local authorities in Kent

## Map 4: Female life expectancy at birth 2021-23: Local authorities in Kent

### Female life expectancy at birth 2021-23: Kent Local authorities

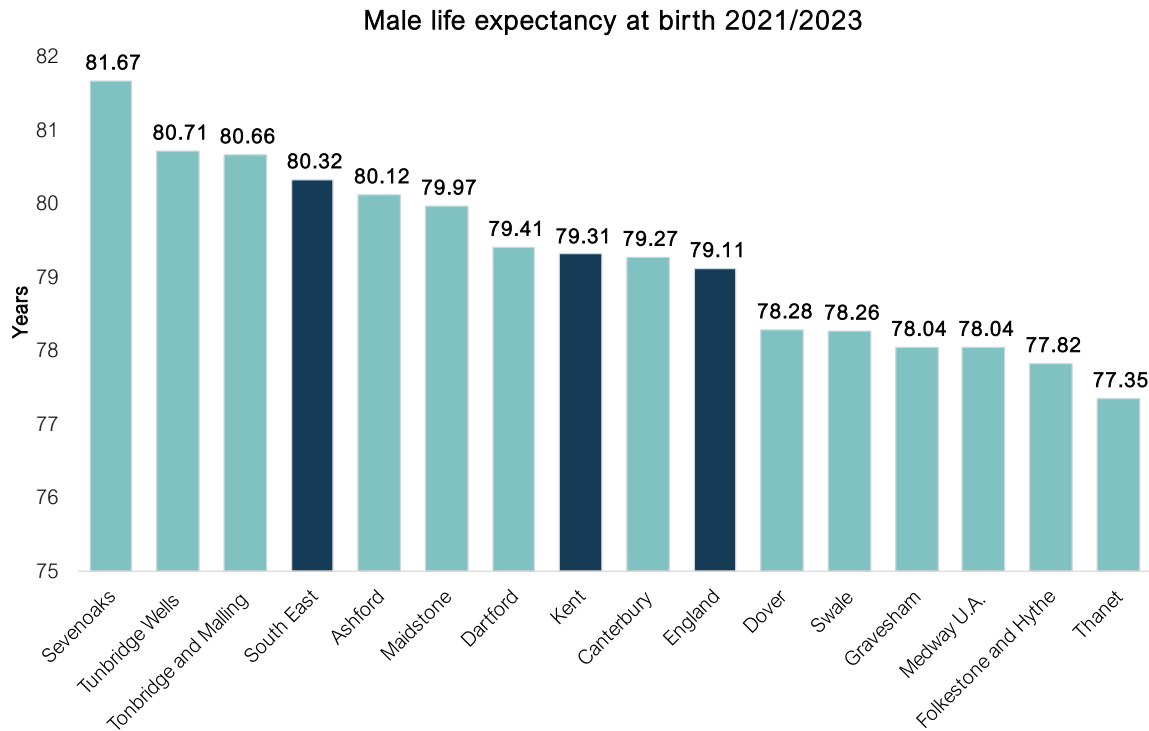

Within the Kent local authority districts, Sevenoaks has the highest male life expectancy at birth at 81.67 years. Sevenoaks also has the highest female life expectancy at birth at 84.77 years. Both figures are higher than the national, regional, and county figures.

Thanet has the lowest life expectancy from birth for both males and females. Life expectancy for males at birth here is 77.35 years and for females at birth is 81.92 years.

Kent has five local authorities where life expectancy for males is lower than the national average (79.11). These are Dover, Swale, Gravesham, Folkestone & Hythe and Thanet. Four local authorities in Kent have a lower life expectancy for females than the national average (83.05) which are Dartford, Swale, Folkestone & Hythe and Thanet.

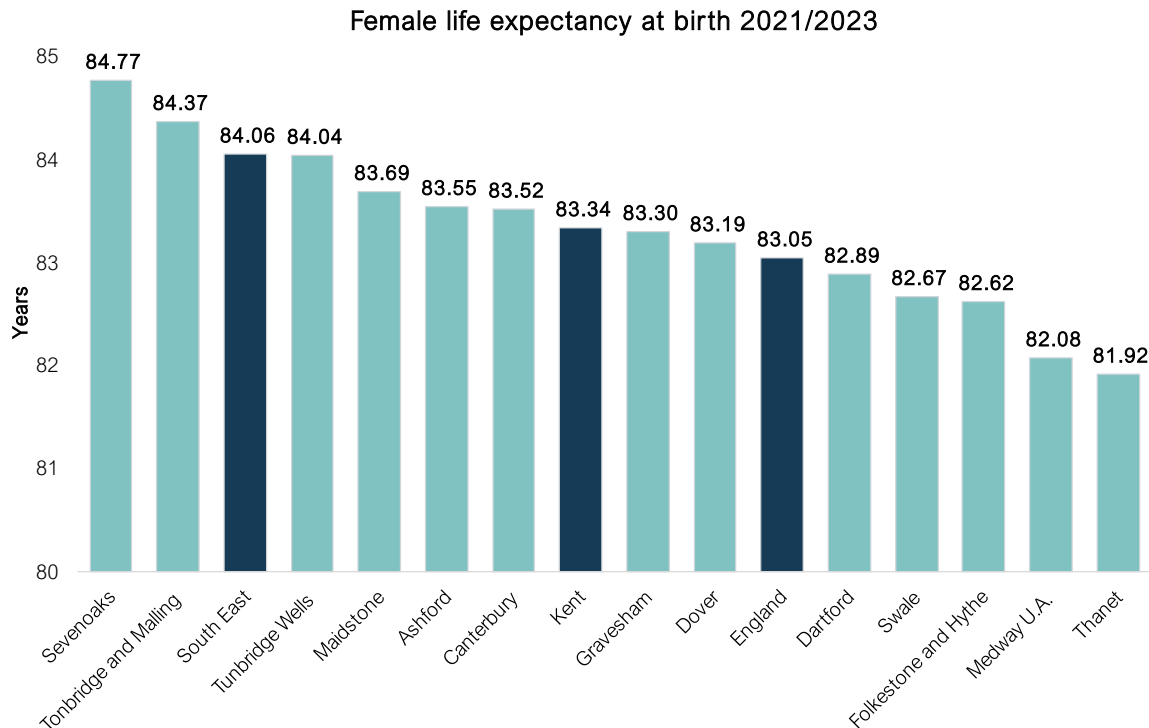

Charts 1 and 2 show male and female life expectancy at birth in 2021/23 in Kent districts, Medway, Kent overall, the South East and England.

### Chart 2: Female life expectancy at birth 2021/23

Source: Office for National Statistics (ONS)© Crown Copyright  
Chart produced by Kent Analytics, Kent County Council

The highest difference between male and female life expectancy is in Gravesham where females born between 2021/23 can expect to live +5.26 years longer than males born in the same period. Sevenoaks has the lowest difference between the sexes with females born between 2021/23 having a life expectancy that is +3.10 years longer than males born in the same period.

Table 3 shows the male and female life expectancy at birth in each of the Kent districts and Medway, the difference in years between male and female in each area, and where each area ranks in comparison with all English local authorities.

The table in Annex 1 at the end of this bulletin provides life expectancy at birth for males and females in all English local authorities. The annex table is ranked in order of highest male life expectancy to lowest, 1 being the highest life expectancy to 294 being the lowest.

**Table 3: Life expectancy at birth (years): Kent local authority districts and Medway Unitary Authority**

Local Authority	Male life expectancy (years)	Male Rank (out of 294 local authorities)	Female life expectancy (years)	Female Rank (out of 294 local authorities)	Difference between male and female life expectancy (years)
Sevenoaks	81.67	19	84.77	50	3.10
Tunbridge Wells	80.71	74	84.04	92	3.33
Tonbridge & Malling	80.66	77	84.37	75	3.71

## Time series of life expectancy at birth

The coronavirus (COVID-19) pandemic led to increased mortality in 2020/2021, and the impact of this is seen in the life expectancy estimates for 2020/2022. A fall in period life expectancy does not mean that a baby born in 2020/2022 will go on to live a shorter life than a baby born in 2011/2013; average lifespan will be determined by changes in mortality rates across their lifetime and if mortality rates improve, then period life expectancy will go back up.

Life expectancy for males at birth in England has increased year on year for the first six years of the last decade, then has fallen each year up to 2020/22. It has increased in 2021/23 to 79.11 years. Although life expectancy at birth has increased it is still lower compared to 2011/13 (-0.17 years).

It has remained fairly consistent in the South East while in Kent it has decreased from 79.83 years to 79.31 years compared to 2011/13 (-0.52 years), and in Medway Unitary Authority from 78.73 years to 78.04 years (-0.69 years) in the last decade. Chart 3 shows the change in male life expectancy at birth between 2011/13 and 2021/23 in England, the South East, Kent and Medway Unitary Authority.

**Chart 3: Male life expectancy at birth 2011/13 to 2021/23**

Source: Office for National Statistics (ONS) © Crown Copyright  
Chart produced by Kent Analytics, Kent County Council

Over the past decade the majority of local authorities in Kent have seen a decline in male life expectancy at birth. Dartford, Sevenoaks and Tonbridge & Malling each saw an increase. The largest difference of +0.46 years was seen in Sevenoaks, increasing from 81.21 years to 81.67 years.

The largest decline in the last decade was seen in Folkestone & Hythe, with a male life expectancy at birth of 79.46 years in 2011/13 to 77.82 in 2021/23 (-1.64 years).

Table 4 shows the change in life expectancy for males at birth in Kent local authorities, Kent, Medway, the South East and England, in the first five years and last five years of the past decade, and the overall 10-year change.

**Table 4: Change in life expectancy for males at birth between 2011/13 and 2021/23**

Area	2011/13 to 2016/18	2016/18 to 2021/23	10-year change
England	0.27	-0.44	-0.17
South East	0.28	-0.25	0.03
Kent	-0.08	-0.44	-0.52
Medway U.A.	0.30	-0.99	-0.69
Ashford	-0.37	-0.46	-0.83
Canterbury	-1.30	0.26	-1.04
Dartford	0.46	-0.19	0.27
Dover	0.23	-0.93	-0.70

Source: Office for National Statistics (ONS), ©; Presented by Kent Analytics, Kent County Council

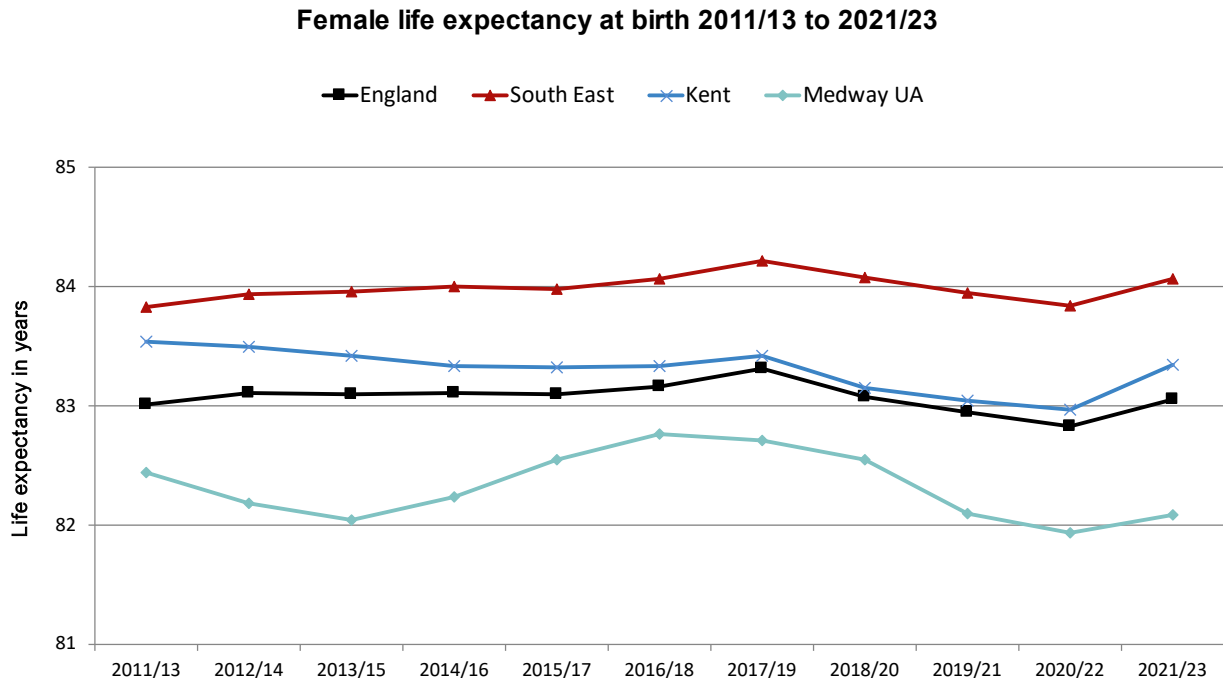

Life expectancy for females at birth has steadily increased from 2011/13 to 2017/19 in England however has declined in recent years. Overall, female life expectancy at birth over the last decade has slightly increased from 83.01 years to 83.05 years (+0.04 years).

It has decreased in the last decade from 83.53 years to 83.34 years, (-0.19 years) in Kent, and decreased by 0.36 years in Medway Unitary Authority to 82.08 years.

There has been an increase in female life expectancy at birth from 83.83 years to 84.06 years (+0.23 years) in the South East.

Chart 4 shows the change in female life expectancy at birth between 2011/13 and 2021/23 in England, the South East, Kent and Medway Unitary Authority.

#### Chart 4: Female life expectancy at birth 2011/13 to 2021/23

Chart produced by Kent Analytics, Kent County Council

Over the past decade five local authorities within Kent (Dartford, Dover, Sevenoaks, Gravesham and Maidstone) have seen a growth in female life expectancy at birth. Dartford has seen the greatest increase of +1.01 years from 81.88 years to 82.89 years.

Of the seven Kent local authorities that have seen a decline in female life expectancy at birth over the past ten years, Tunbridge Wells saw the largest decline of 1.08 years (from 85.12 years to 84.04 years).

Table 5 overleaf shows the change in life expectancy for females at birth in Kent local authorities, Kent, Medway, the South East and England, in the first five years and last five years of the past decade, and the overall 10-year change.

**Table 5: Change in life expectancy for females at birth between 2011/13 to 2021/23**

Area	2011/13 to 2016/18	2016/18 to 2021/23	10-year change

## Life expectancy at age 65

### English regions

A male aged 65 in England between 2021/23 has an estimated life expectancy of 18.67 years and a female aged 65 has an estimated life expectancy of 21.14 years. Life expectancy varies across the regions by as much as 1.40 years for men and 1.60 years for women.

Males and females aged 65 between 2021/23 within the South West, the South East, the East of England and London have greater life expectancies than the England average. The South West region has the highest male life expectancy (19.27 years), and the South East has the highest female life expectancy (21.79 years) of all the regions.

The North East has the lowest life expectancy for males (17.87 years) and females (20.19 years) of all the regions.

Table 6 overleaf shows life expectancy at age 65 for males and females in England and the regions and shows the difference between males and females in each area.

**Table 6: Life expectancy at age 65 (years): England and the regions**

Region	Males	Females	Difference
South West	19.27	21.76	2.49
<b>South East</b>	<b>19.26</b>	<b>21.79</b>	<b>2.53</b>
East of England	19.07	21.53	2.46
London	18.88	21.75	2.87
<b>England</b>	<b>18.67</b>	<b>21.14</b>	<b>2.47</b>
East Midlands	18.49	20.81	2.32
West Midlands	18.39	20.88	2.49
Yorkshire & The Humber	18.26	20.60	2.34
North West	17.90	20.27	2.37
North East	17.87	20.19	2.32

Table ranked on male life expectancy

## South East counties

Within the counties in the South East region, there is a difference of 1.21 years between the highest and lowest life expectancy for males and a difference of 1.05 years for females.

Within the South East region, Oxfordshire has the highest life expectancy for males (19.88 years) and females (22.33 years) at age 65 between 2021/23.

In Kent, male and female life expectancy at age 65 rank lowest out of all the counties within the South East region (18.67 years for males and 21.28 years for females). Male life expectancy is equal to the national figure and female life expectancy in Kent is slightly higher than seen nationally.

Table 7 shows life expectancy at age 65 for males and females in South East counties and shows the difference between males and females in each area.

**Table 7: Life expectancy at age 65 (years): South East counties**

County	Males	Females	Difference
Oxfordshire	19.88	22.33	2.45
Surrey	19.86	22.31	2.45
Hampshire	19.79	22.21	2.42
West Sussex	19.40	22.01	2.61
East Sussex	19.15	21.64	2.49
<b>Kent</b>	<b>18.67</b>	<b>21.28</b>	<b>2.61</b>

Table ranked on male life expectancy

## English Local Authority Districts

There is a difference of 4.89 years between the highest and lowest life expectancy for males at age 65. Hart in Hampshire has the highest with 21.01 years and Blackpool in the North West has the lowest with 16.12 years.

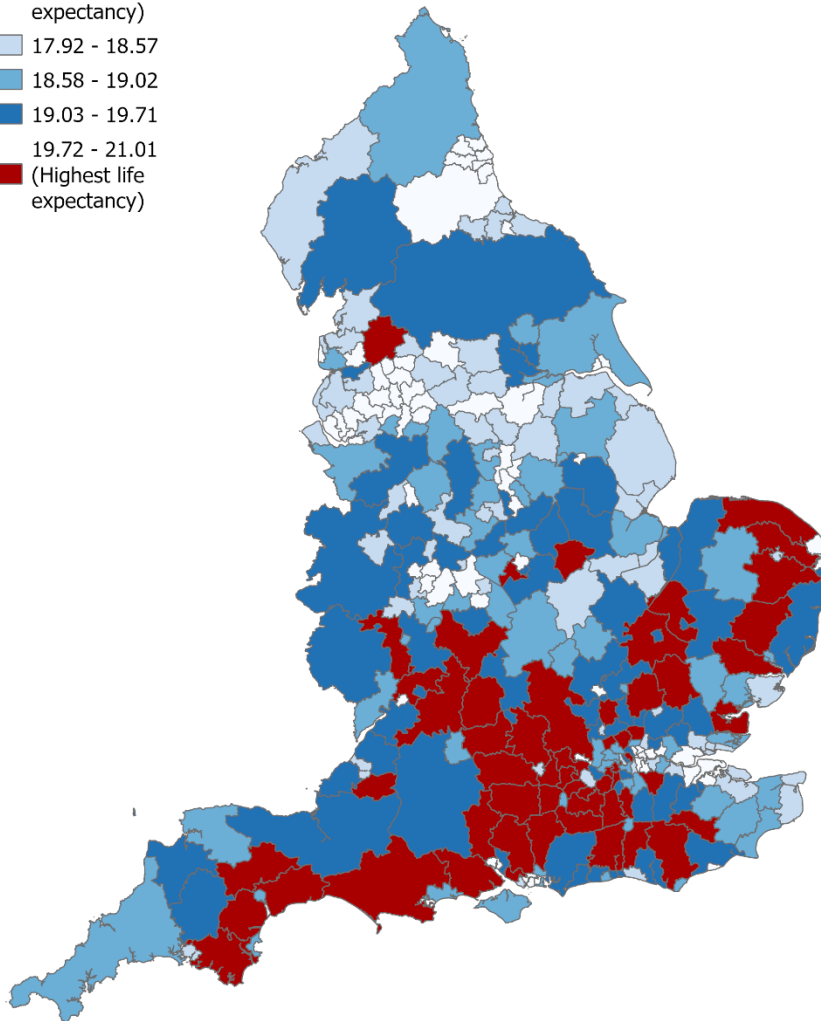

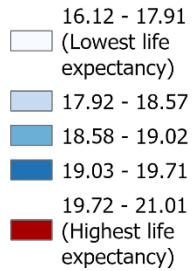

The difference between the highest and lowest life expectancy for females is 4.60 years. Winchester in Hampshire has the highest with 23.25 years, and Knowsley near Liverpool in the North West has the lowest with 18.65 years.

Maps 5 and 6 show male and female life expectancy at birth in local authorities in England. Life expectancy at age 65 in all English local authorities is also presented in Annex 2 at the end of this bulletin.

Within the Kent local authority districts the difference between the highest and lowest life expectancy at age 65 for males is 2.03 years and for females is 1.78 years.

Although the range between the highest and lowest life expectancy is smaller than seen nationally, Kent has areas which are within the 20% highest and lowest for life expectancy at age 65 in England. Tunbridge Wells is in the 20% of areas with the highest male life expectancy at age 65 (19.72 years or more) and Sevenoaks is in the 20% of areas with the highest female life expectancy at age 65 (22.17 years or more).

Gravesham as well as Medway are in the 20% of areas with the lowest male life expectancy at age 65 (17.91 years or less). No Kent districts are in the 20% of areas with the lowest female life expectancy at age 65 (20.34 years or less).

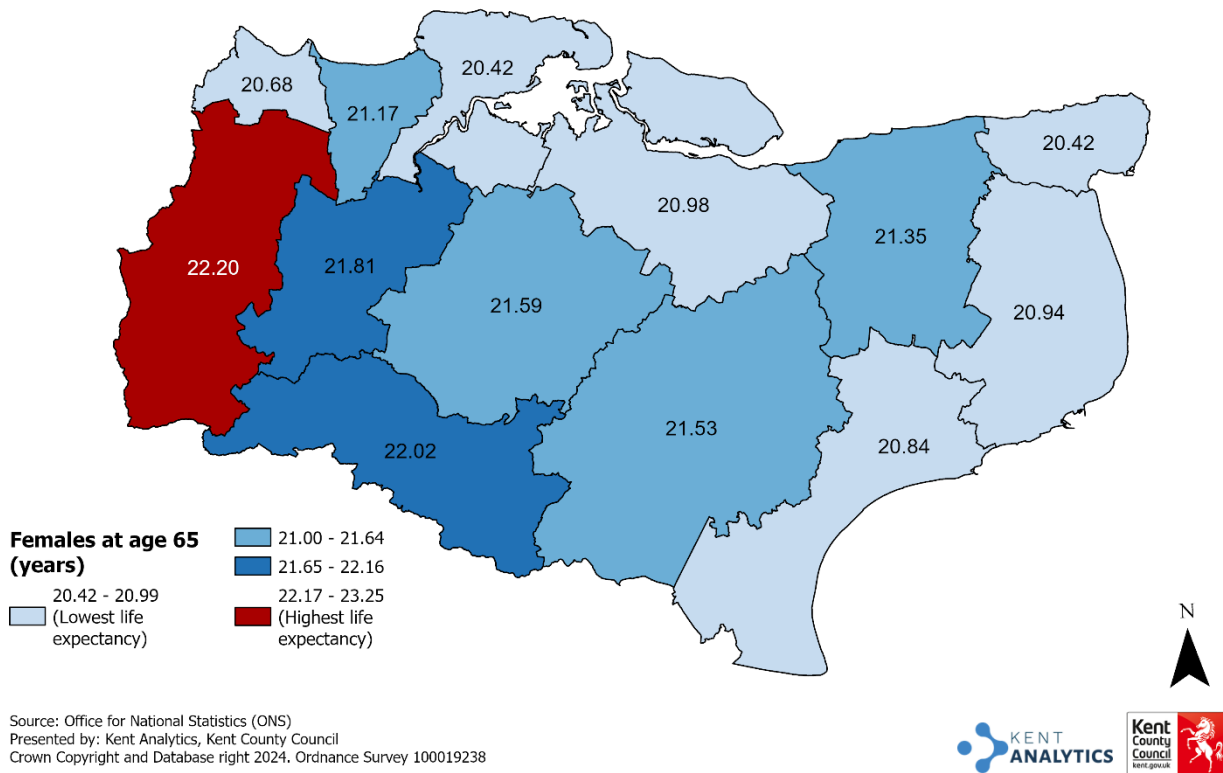

Maps 7 and 8 show male and female life expectancy at birth in local authorities in Kent. Whether Kent districts have lower or higher life expectancy is in comparison to all other local authorities in England.

### Map 7: Male life expectancy at age 65 2021-23: Local authorities in Kent

## Map 8: Female life expectancy at age 65 2021-23: Local authorities in Kent

### Female life expectancy at age 65 2021-23: Kent Local authorities

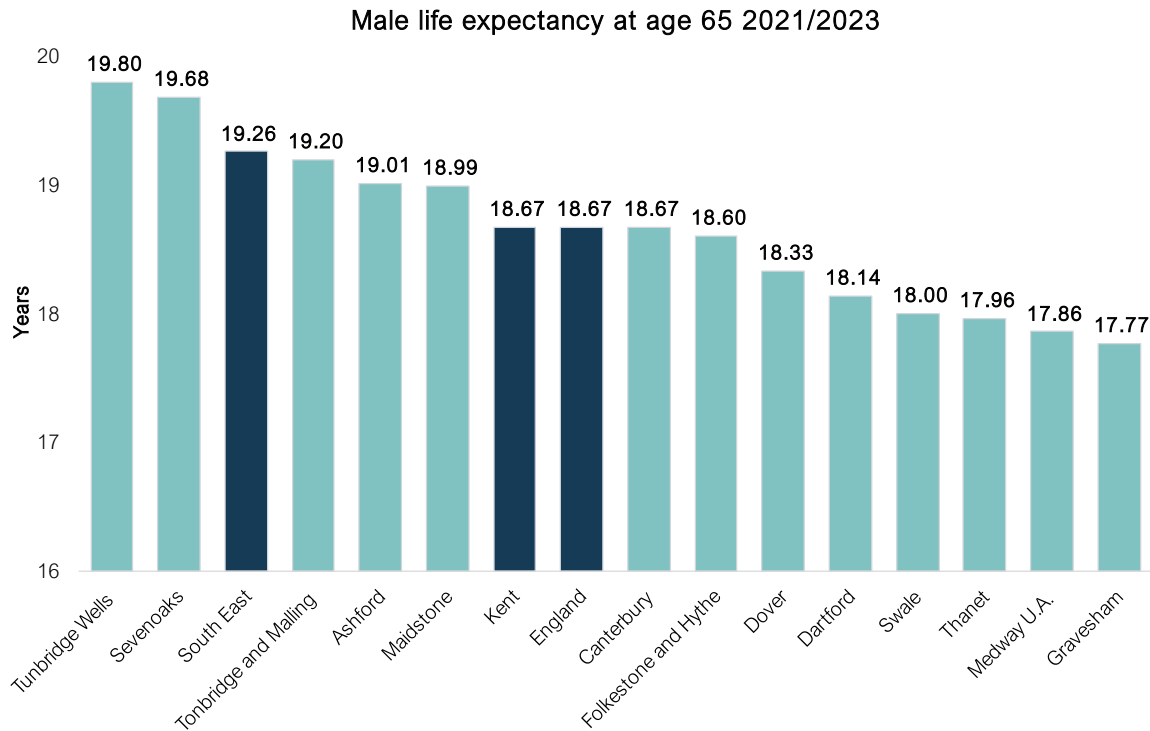

Within Kent's local authorities, Tunbridge Wells has the longest life expectancy for males (19.80 years) and Sevenoaks has the longest life expectancy for females (22.20 years) at age 65. These figures are higher than the national, regional, and county figures.

Gravesham has the shortest life expectancy for males (17.77 years) and Thanet has the shortest life expectancy for females (20.42 years) at age 65.

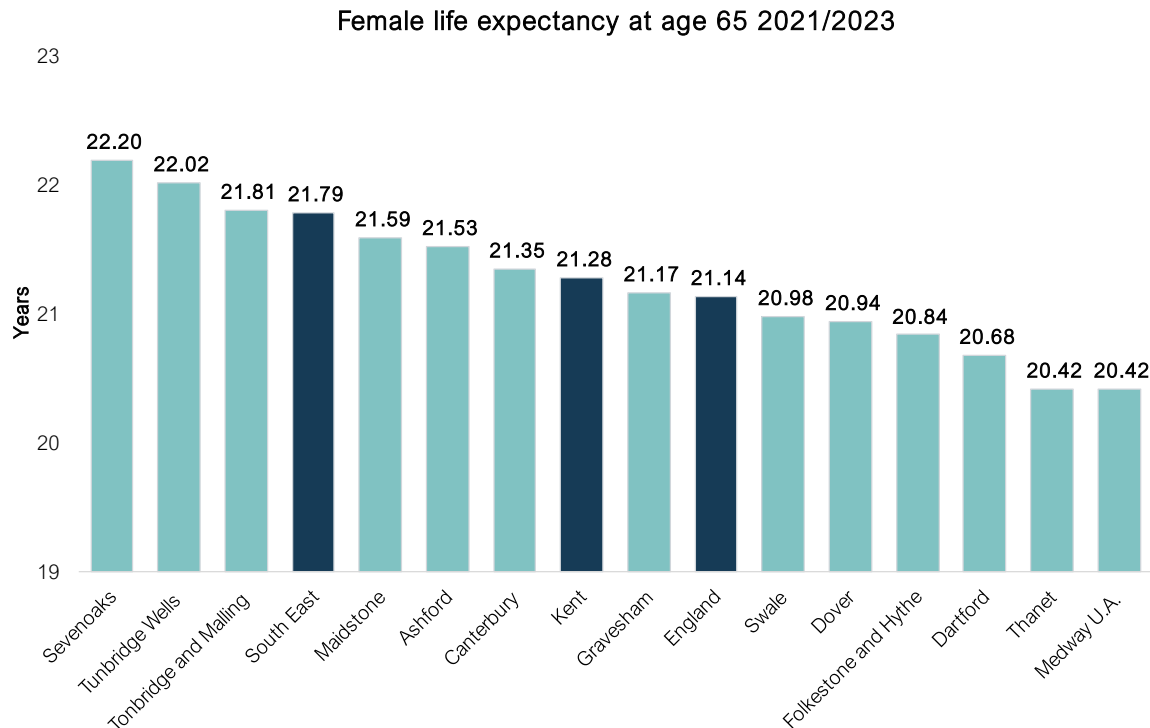

Charts 5 and 6 show male and female life expectancy at age 65 in 2021/23 in Kent districts, Medway, Kent overall, the South East and England.

### Chart 5: Male life expectancy at age 65 2021/23

Chart produced by Kent Analytics, Kent County Council

### Chart 6: Female life expectancy at age 65 2021/23

Source: Office for National Statistics (ONS)© Crown Copyright  
Chart produced by Kent Analytics, Kent County Council

The highest difference between male and female life expectancy is in Gravesham where females aged 65 between 2021/23 have a life expectancy that is 3.40 years longer than males aged 65.

Tunbridge Wells has the lowest difference between the sexes with females aged 65 between 2021/23 having a life expectancy that is 2.22 years longer than males aged 65 in the same period.

Table 8 shows the male and female life expectancy at age 65 in each of the Kent districts and Medway, the difference in years between male and female in each area, and where each area ranks in comparison with all English local authorities.

The table in Annex 2 at the end of this bulletin provides life expectancy at age 65 for males and females in all English local authorities. The annex table is ranked in order of highest male life expectancy to lowest, 1 being the highest life expectancy to 294 being the lowest.

**Table 8: Life expectancy at age 65 (years): Kent local authority districts and Medway Unitary Authority**

Local Authority	Male life expectancy (years)	Male Rank (out of 294 local authorities)	Female life expectancy (years)	Female Rank (out of 294 local authorities)	Difference between male and female life expectancy (years)
Tunbridge Wells	19.80	48	22.02	72	2.22
Sevenoaks	19.68	61	22.20	52	2.52

## Time series of life expectancy at age 65

Over the past decade male life expectancy at age 65 in England has mostly increased each year from 2011/13 to 2017/19. In the last few years it has declined though in 2021/23 increased to 18.67 years. This is an increase of 0.14 years in the last decade.

The South East and Medway have both also seen an increase in male life expectancy at age 65 in the last decade, increasing by +0.15 to 19.26 years in the South East, and increasing by +0.02 to 17.86 years in Medway.

In Kent it has decreased from 18.78 years to 18.67 years, a fall of 0.11 years. Chart 7 shows the change in male life expectancy at age 65 between 2011/13 and 2021/23 in England, the South East, Kent and Medway Unitary Authority.
