

Kent Economic Indicators

Data is included for 12 indicators from a variety of sources. The latest data available as of June 2025 is presented.

NOTE: The term “Kent” refers to the Kent County Council area and excludes Medway

Further Information

Kent Analytics
Kent County Council
[kent.gov.uk](https://www.kent.gov.uk)

This bulletin presents a summary of the economy at county and district level based on twelve economic indicators.

The analysis uses two models: one at County level, the other at District level.

The County-level model summarises a range of indicators for all 152 County and Unitary Authorities in England.

The district-level model does the same for the 309 District and Unitary Authorities in England.

In both models, the performance chart shows how each area performs compared to the national median, based on these indicators.

Introduction

Methodology

The County-level model summarises a range of indicators for all 152 County and Unitary Authorities in England (using boundaries as of 2021), ranks the indicators and then converts the ranks to percent-ranks (a rank score out of 100). This standardises all the scores and enables direct comparison of what are very disparate indicator values.

The district-level model does the same for the 309 District and Unitary Authorities (as of 2021) in England.

In ranking the indicators, the order in which they are ranked has been set so that the higher the score the “better” the outcome. So, for example the earnings indicators are ranked in ascending order where the highest earnings (good) have a percent rank score of 100. In the case of unemployment however, the indicators are ranked in descending order, so that the lowest unemployment rates (good) have a percent rank score of 100. The closer to 100 the percent rank score is the better.

Indicators

12 indicators are used within the district and county models.

Unemployment – taken from the ONS Annual Population Survey model-based estimates of unemployment. This shows the percentage of all people aged 16+ without a job who were available to start work in the two weeks following their interview and who had either looked for work in the four weeks prior to interview or were waiting to start a job they had already obtained.

Job Density – This is an indicator of labour demand in an area showing the number of jobs available per working age resident. It is calculated by dividing the number of jobs in an area by the resident population aged 16-64. A job density of 1.0 would mean that there is one job for every resident aged 16-64. A density of less than 1 indicates there are fewer than 1 job per resident.

The total number of jobs is a workplace-based measure and comprises employee jobs, self-employed, government-supported trainees, and HM Forces.

Employee change – This looks at the 5-year percentage change in number of employee jobs. This indicator uses Business Register and Employment Survey (BRES) data.

Employees in the Knowledge Economy – using figures from the BRES this shows the proportion of employee jobs in the Knowledge Economy. The Knowledge Economy comprises those industries whose main purpose centres on knowledge or information, from highly technical industries and knowledge intensive services to creative industries. The knowledge economy has been identified as a key sector to drive future economic growth.

Employment rate – shows the proportion of those aged 16-64 who are in employment using data from the Annual Population Survey.

Earnings – using data from the Annual Survey of Hours and Earnings this looks at the average (median) weekly earnings on a resident and workplace basis.

GVA – using Office for National Statistics estimates which shows the GVA (the value of the goods and services produced in the economy) which is used to measure the overall economic well-being of an area. Data is shown as the amount of GVA per head of adult population.

Business Stock – this gives a snapshot of the number of vat registered businesses in the area. This data comes from the ONS Business Demography dataset.

3 Year Survival Rates – this shows the proportion of new businesses which remain surviving after 3 years of trading. This data comes from the ONS Business Demography dataset.

RQF4+ – using figures from the Annual Population Survey this shows the proportion of the population aged 16-64 who are qualified to RQF (Regulated Qualifications Framework) level 4 or above. This is based on a sample survey and results at district level may fluctuate. Data are only available from 2022 onwards.

RQF2+ – using figures from the Annual Population Survey this shows the proportion of the population aged 16-64 who are qualified to RQF (Regulated Qualifications Framework) level 2 and above. This is based on a sample survey and results at district level may fluctuate. Data are only available from 2022 onwards.

Publication dates/survey dates

The charts and tables are published based on what is available at the time of publishing. The charts therefore show the latest data that is available as of June for each of the indicators. Some datasets lag in terms of their release date compared to their actual survey date. The following table sets out the actual survey dates for each dataset that are used in each performance chart.

Tables and charts

The following pages show:

Table

Timeseries table for the indicator values for each area. Tables for England and the South East are presented at the beginning of this bulletin for comparison.

Performance Chart

Chart showing the score for each compared to other areas in England and against the England Median.

The Kent chart shows Kent's position compared to all counties and unitary authorities in England. The district charts show each districts national performance compared to all district and unitary authorities in the South East.

Tables 2 and 3 show the indicator values for England and the South East for comparison.

Kent County Council area

Kent ranks above the national median in 6 indicators: median gross weekly resident earnings; employment rate; 5-year percentage change in employees; stock of businesses; 3-year business survival rate; GVA per head.

Kent ranks below the national median in 6 indicators: job density; unemployment rate; median gross weekly workplace earnings; percentage qualified to RQF4 and above; percentage qualified to RQF2 and above, and percentage of employees in the knowledge economy.

Kent performs best compared to other counties and unitary authorities for stock of businesses with a score of 99 out of 100 and ranking 2nd out of 152 authorities.

Kent performs worst compared to other counties and unitary authorities for percentage qualified to RQF4+ with a score of 35.7 out of 100.

The values for each indicator for Kent are shown in table 4. Kent's indicator scores for 2025 can be found in table 31 at the end of this bulletin.
