This bulletin presents the latest (2015) data from the Business Register and Employment Survey. It looks at employee change since 2009 and also presents the latest industrial structure both locally and nationally.

### Kent Summary

- The latest data shows a total of 617,000 employee jobs in Kent in 2015. This means that Kent provides 2.2% of all employee jobs nationally.
- As the economy continues to recover from the recession (which started during the 2008-09 period), a considerable amount of restructuring has taken place. The number of employee jobs in Construction, Public administration & defence and Manufacturing has fallen since 2009, nationally and this has also been the case in Kent.
- A number of anomalies can be seen in some sectors at District level, which has cast some doubt on the consistency of the data. These are highlighted in the tables at the end of this bulletin.
- The next update of this bulletin will include the 2016 results and will be published in October 2017.

---

## Introduction

The Business Register and Employment Survey (BRES) was introduced in 2009, replacing the Annual Business Inquiry as the source of employee data from the Office for National Statistics (ONS).

The release of the 2015 data now gives a longer time-series with which to examine the structural changes that are continuing to take place as the economy recovers from the recession which primarily impacted on employment numbers during the 2008 to 2009 period.

The industrial sectors used in this bulletin are defined using the 2007 Standard Industrial Classification (2007SIC). Detailed information about the types of industry which make up each of the industrial sectors is available from the [UK Standard Industrial Classification of Economic Activities](#) published by the Office for National Statistics.

ONS have also provided revisions to the earlier data in the time-series, which now supersede previously published figures.

To comply with ONS requirements, all data is rounded to the nearest 100.

Local corrections have been applied to the District level data, to include estimates for Agricultural employees, who are excluded at sub-regional level from the published data. This is to allow a better comparison with both regional and national data.

**There are, however, some anomalies remaining in the published data, which could be due to the collection and/or modelling of the data and these are solely the responsibility of the ONS. These figures are highlighted in the District level tables and in the notes at the end of this bulletin.**

## Analysis

Table 1 summarises the latest data for Kent, together with regional and national comparisons.

**Table 1: BRES Employee jobs, 2009-2014**

	2009	2010	2011	2012	2013	2014	2015
Kent	565,000	574,500	573,800	561,200	568,200	587,500	617,000
Medway	83,400	83,700	80,800	85,900	84,000	85,000	87,400
Kent & Medway	648,300	658,200	654,600	647,100	652,200	672,500	704,400
South East LEP	1,481,300	1,478,300	1,476,500	1,474,200	1,468,800	1,517,100	1,577,800
South East (former GoSE region)	3,727,200	3,783,400	3,756,000	3,779,700	3,824,600	3,908,000	4,041,000
England	23,064,700	23,085,300	23,073,200	23,256,000	23,560,800	24,285,800	24,866,600
Great Britain	26,642,600	26,581,300	26,593,500	26,752,900	27,096,300	27,931,600	28,531,100

Source: ONS

Presented by: Research & Evaluation, Kent County Council

Chart 1 shows how, on an index of change basis (where the 2009 employee total = 100), how Kent has performed relative to Great Britain.

**Chart 1**

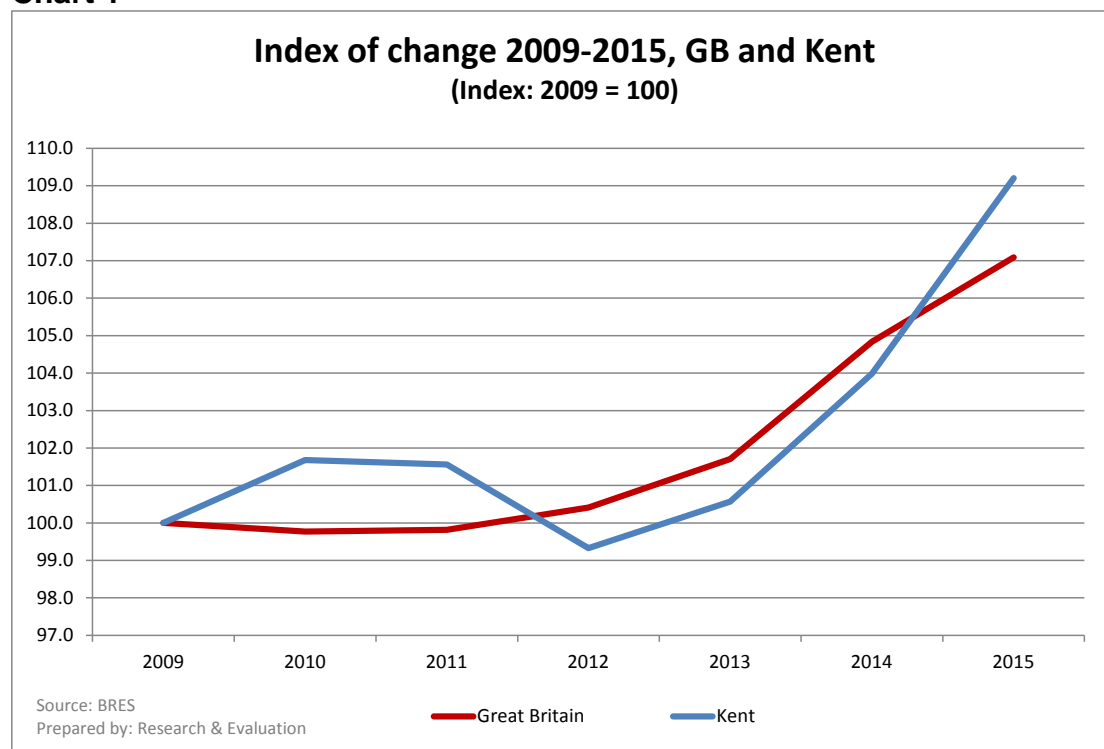

Chart 1 shows that the post-recession recovery was initially faster in Kent, than had been the case nationally. The latest data, however, shows that the positions were reversed in the 2011-2012 period, with employee numbers dropping significantly in Kent. The latest data shows a return to positive growth in employee job numbers in Kent, and since 2014 at a higher rate than the national figure.

The following analysis will look at the sectors that are now providing growth and how the industrial structure is changing, both nationally and locally.

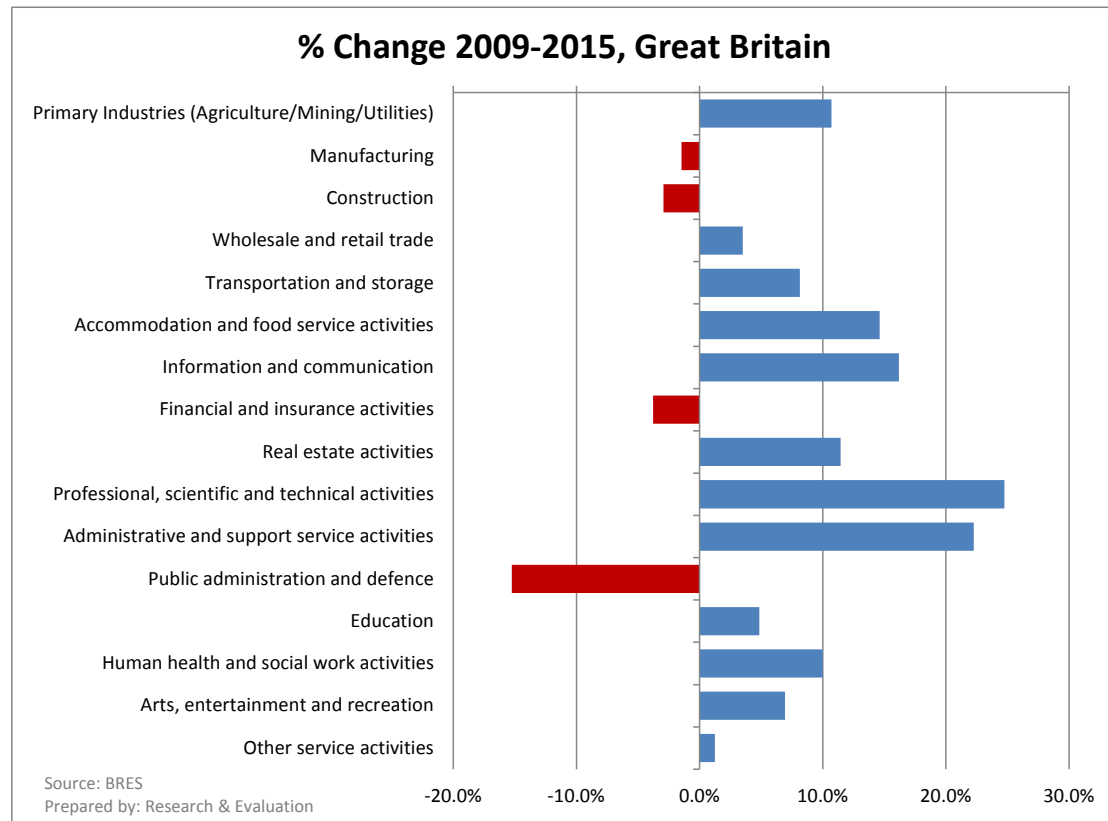

This analysis coincides with the post-recession period from 2009 onwards.

Chart 2 shows the change in employees since 2009 by sector in Great Britain.

Overall employee jobs have increased nationally by 7.1% ( growth of 1,888,500 employee jobs).

Since 2009 four sectors saw a reduction in employee jobs, the most significant of these was in public administration and defence which saw an overall reduction of 15.3% equivalent to a loss of 226,500 employee jobs.

**Chart 2 – Great Britain**

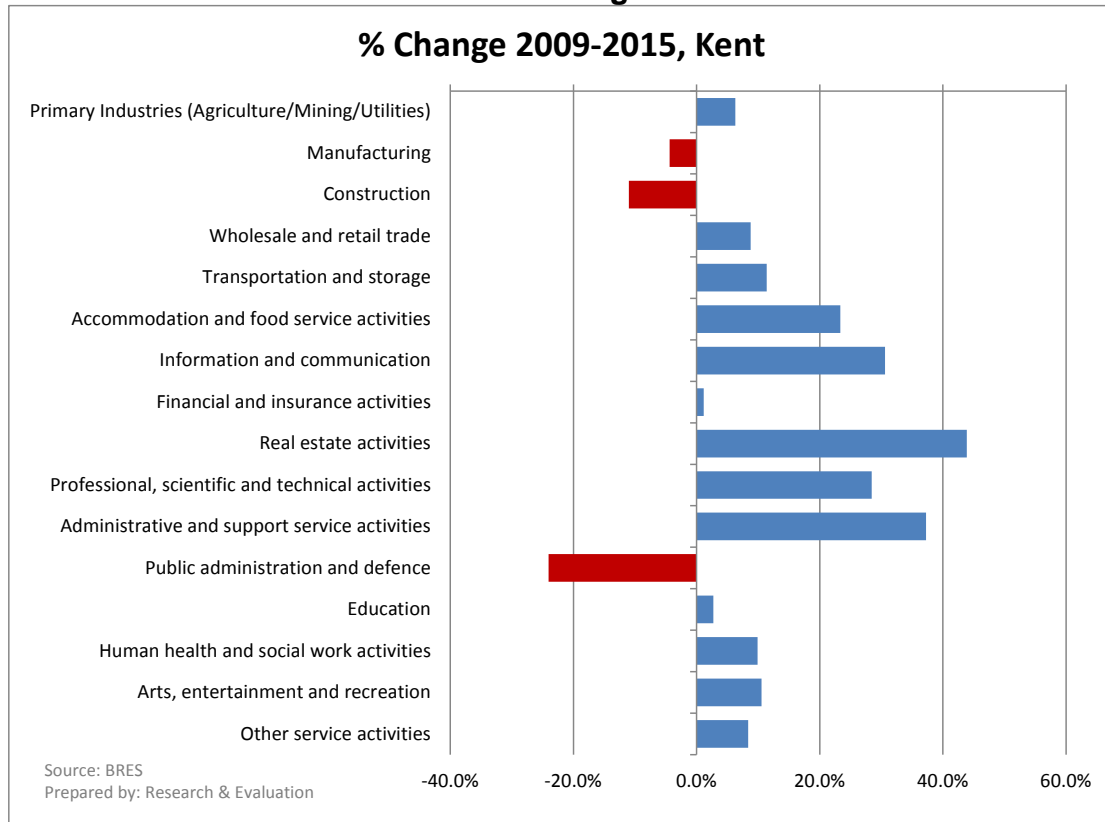

The sectors largely responsible for generating growth over this period were: Professional and scientific services (+24.7%, 472,100 additional employee jobs) and Administration and supportive services (+22.3%, 458,200 additional jobs).

Chart 3 shows the change in employees since 2009 by sector in Kent.

In Kent, the impact of job losses has shown a similar pattern to that experienced nationally, with percentage employee job losses mainly in the same sectors; Public administration and defence -24.0% (-7,500 employee jobs), construction -11.0% (-4,200 employee jobs) and Manufacturing -4.4% (-1,800 employee jobs).

**Chart 3 – Kent industrial structure change since 2009**

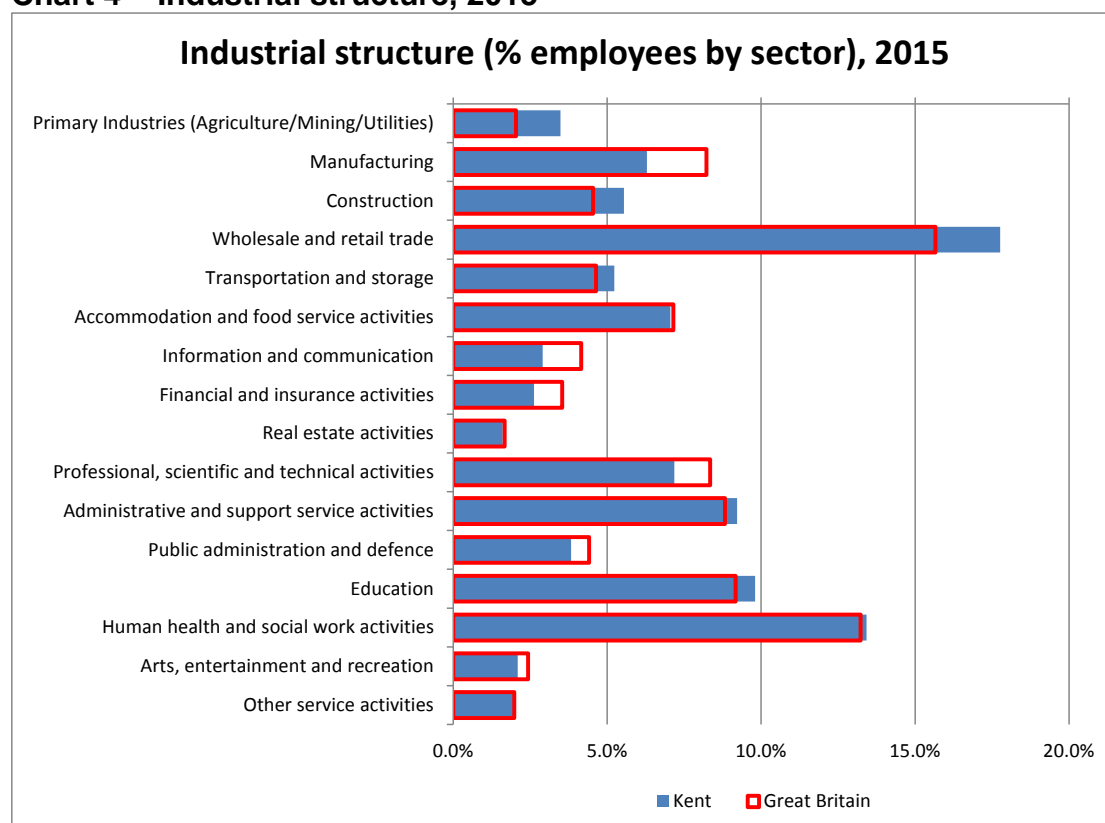

Those sectors in Kent responsible for the majority of growth in employees include: Administrative and support service activities +37.3% (+15,500), professional, scientific and technical activities +28.4% (+9,800), wholesale and retail trade +8.8% (+8,800) and Accommodation and Food Services +23.3% (+8,200 employee jobs).

Overall, the published data shows a growth in employee numbers in Kent between 2009 and 2014 of +4.0% (+52,100 employee jobs).

As a result of the sectoral shift in employees, the industrial structure for both Kent and Great Britain, as at 2015, now looks like this:

**Chart 4 – Industrial structure, 2015**

Relative to Great Britain as a whole, Kent has significantly higher proportion of employees in:

- Primary Industries (Agriculture/Mining/Utilities)
- Wholesale and retail trade
- Construction

And marginally more in:

- Administrative and support service activities
- Transportation and Storage
- Education
- Human health and social work activities

The sectors where Kent has significantly lower proportions of employees compared to Great Britain are:

- Manufacturing
- Information and communication
- Professional, scientific and technical activities
- Financial and insurance activities

---

The following tables show the employee numbers for each of the Kent Districts and Medway, plus regional and national comparator areas.

A number of individual entries have been highlighted as being potentially unreliable figures, as the changes do not seem to reflect local understanding and may indicate inconsistencies in the modelling of the sample survey data, rather than actual employee change on the ground.

Please see the conclusions page at the end of this bulletin.

**As a result of these apparent inconsistencies, we strongly advise caution in the interpretation and use of the highlighted numbers.**

Source: Business Register and Employment Survey (BRES), Office for National Statistics (ONS).

Published figures have been amended to include an estimate of Agricultural employees that are now excluded from the raw BRES figures for areas below regional level.

Prepared by: Research & Evaluation, Business Intelligence, Kent County Council.

---

## Notes

A discontinuity exists between the BRES 2010 and 2011 estimates. This discontinuity is caused by changes made to the BRES questionnaire in 2011 that have made it clearer to respondents as to how they should be returning information on working owners. This change has had the effect of increasing the number of employees.

A more detailed analysis of the discontinuity can be found on the Office for Nations Statistics webpages on [BRES Guidance and Methodology](#).

However, there are still some apparent anomalies in the BRES data, which are of some concern, particularly at the District level.

As we do not have access to the individual records, it is not possible to resolve all of these issues individually. For this reason, the data has been summarised for Kent “as published” (other than applying the agricultural adjustment). Where we suspect that there may be some inconsistency in the data, either through missing data returns or sampling/modelling errors, we have highlighted the individual figures.

We therefore strongly advise treating these highlighted figures with caution.

The exclusion of agricultural data from the published BRES data below regional level has meant that estimates of agricultural employees have had to be made and added to the published data, in order to enable effective comparison between local and regional/national performance.

These corrections have been based on published Agricultural Census data from The Department for the Environment and Rural Affairs (DEFRA). However, DEFRA are no longer able to publish the small area (local authority level) data, on an annual basis. Instead, they will only be published every three years.

The latest DEFRA data (2013) has been used in this bulletin.
