Latest Progress
Construction works have continued to make progress through September and October. The site has started to take shape with the extent of the new roundabout now visible. In the last few weeks surface water drainage on the main section of the new roundabout has been installed. Pipes under the road have been laid for utility companies so that the need for future pipes and cables can be accommodated without disrupting traffic or interrupting supply. Kerbs have been laid and the stone layers of the road foundation brought up to the correct level ready for final surfacing.

Temporary Closure of Barton Hill Drive
The works along the temporarily closed Barton Hill Drive are progressing as planned. The existing traffic signals were removed the day after the closure and the traffic island removed at night. The road has been excavated and the new stone foundation laid at the north end. A gas diversion has been laid adjacent to the road.

Planned Night Time Road Closure
Overnight closures of A2500 Lower Road are planned from Monday 12 November 2018 for up to 5 weekday nights, from 19:30 hours through until approximately 06:00 hours each night to carry out surfacing where the new roundabout meets the existing A2500 Lower Road.

A2500 Lower Road will be closed between B2231 Sheppey Way and Thistle Hill Way. The diversion route for the night time closure is shown overleaf. Local access to properties within the closure will be maintained.
