Phase 2

Construction works for Phase 2 are planned to be split into two phases. Initially Phase 2a will include the widening of the road at Cowstead Corner Roundabout, the construction of the new footway/cycleway between Cowstead Corner and Barton Hill Drive and installation of associated surface water drainage.

Should further funding become available the intention is to construct Phase 2b which will widen the existing Lower Road up to the new roundabout at Barton Hill Drive and to also provide a right turn lane into Wall End Farm.

Planned Temporary Traffic Signals

The early works on Phase 2a will require the use of two way temporary traffic signals on Lower Road where restricted road widths dictate. The signals will be in place weekdays and will be manually controlled. Where temporary traffic control is not necessary works will be undertaken within coned verges. It will be necessary for works access points to be located along the road in order for the contractor to gain access to works areas.

Latest Progress

Phase 1 construction of the new roundabout is now complete with traffic now having full use of the new roundabout at Barton Hill Drive.
