

Forward Works Programme

Years One and Two 2022/23 - 2023/24

Version	Author	Date	Comment
1.0	Alan Casson	4/10/22	First issue

Introduction

In summer 2021 we published our Highways Asset Management Plan (HAMP), which included, as Appendix C, a five-year Forward Works Programme for the years 2021/22 to 2025/26. This reflected the need to move away from annual programmes and to consider asset management activity a multi-year one.

The first part of the programme concerned the two years 2021/22 - 2022/23. Around half of the schemes included in that programme have now been delivered, and as a result we have now produced a new programme covering the years 2022/23 - 2023/24. As before, most of the sites included in this programme have already been verified by our engineers.

The second part of our programme related to years three to five of our five-year programme (2023/24 - 2025/26). This too is in need of revision to cover the years 2024/25 – 2026/27, and the work required to do this is currently in progress. As before, our new years three to five programme will be largely based on data from our asset management systems, so may be subject to more changes as the schemes are verified. Any schemes involving the potential use of non-standard materials, such as those in conservation areas or requiring detailed design, will remain in the second part until those elements have been resolved and agreed so that there is cost certainty prior to any commitment to deliver on the ground.

This programme is subject to regular review and may change for a number of reasons including budget allocation, contract rate changes, inflationary pressures such as material price increases, conflicting works, and to reflect our changing priorities. The programme and extent of individual sites within the programme may also be revised following engineering assessment during the design phase, and additional sites may be added or others advanced if their condition deteriorates rapidly so that we need to react in order to keep the highway in a safe and serviceable condition.

Notes on our forward works programme for each asset group are included below.

Roads

- Surface preservation involves repairing and treating roads to improve their quality and extend their useful life before they need renewing or reconstructing. We may apply one or more coats of a cold-laid surface treatment material (micro surfacing) or of bitumen and chippings (surface dressing), or we may recycle and re-lay the existing surface material before applying a surface treatment (retread).
- Surface renewal describes the range of responses we may use when the surface or sub-surface layers of a road have deteriorated to the point that they

need to be replaced. On asphalt roads where only the top layers are affected, we remove the existing surface by machine, a process known as milling. We then use a mechanical sweeper to ensure that the prepared surface is free from dust and debris. Finally, we lay the new surfacing material in either one or two layers using a machine called a paver, and compact the new surface with a roller. Where lower levels of a road have also deteriorated, we may fully or partially reconstruct the road. On concrete roads we may carry out localised concrete repairs or replace full sections, and only overlay them with asphalt when this is necessary for engineering reasons.

- Retexturing is carried out where surveys indicate that the texture of the road is starting to deteriorate, and involves treating the road surface to restore its texture and grip.

Footways and Cycle Tracks

- Surface preservation is used where small defects are starting to show, and we wish to treat them now to seal the surface, preventing further deterioration and restoring the condition and appearance of the footway. It involves preparing the footway surface and applying by hand one or two coats of a cold-laid surface treatment material, a process known as slurry sealing.
- Reconstruction involves removing and replacing at least the walking surface and sometimes deeper layers of the footway, and may include renewing kerbs and/or edgings. In some locations this may mean we are renewing damaged paving slabs or replacing slabs with an asphalt surface.

Drainage

- In addition to the works included in the programme, reactive works are conducted in response to enquiries or to remedy operational defects identified during our ongoing programme of proactive maintenance.
- The works within the programme include larger scale asset renewals and drainage improvements. Each site is risk assessed, and then delivery will be prioritised according to the risk to highway safety, risk of property flooding and risk of asset deterioration.
- The works within the programme require a much greater level of investment than other reactive works. The availability of resources and funding, as well as the complexity of locations, can be a significant constraint upon deliverability.

Structures

- In addition to the works included in the programme, we will be continuing to develop our programme of planned works and carrying out reactive works in response to enquiries and our ongoing programme of inspections.

Crash Barriers

- In addition to the works included in the programme, accident damage repairs are prioritised and carried out as either scheduled repair programmes or as separate urgent works.

Street Lighting

- Generally, the replacement of street lighting columns is based on the results of structural testing, a cyclical programme of which is undertaken each year. Due to the high numbers of columns that are likely to be replaced across many locations, it is not possible to provide a detailed schedule of works.
- Most electrical supplies to street lighting columns are owned and maintained by the Distribution Network Operator (DNO) for the area. In Kent this is UK Power Networks. However, a proportion of the electrical supply network to street lighting assets is owned and maintained by KCC. This network is reaching the end of its life, therefore where known failures exist, we plan to replace the network.
- Structural and electrical testing of illuminated signs is ongoing. Where signs have failed a structural test, when replacing the sign we will de-illuminate those that are no longer required to be illuminated. Remedial work is carried out where electrical defects are identified.

Intelligent Traffic Systems (ITS)

- The need for planned work on traffic signals is based on an assessment of the equipment's age and the number of faults which have been reported during the past two years.
- The programme of planned work on traffic signals can be affected by the availability of spare parts, particularly for older equipment which is no longer manufactured.
- Work on traffic signals near development sites has not been included in the assessment as they may need alteration as part of the adjacent works.

Soft Landscape

- Grass cutting: urban areas are cut with a ride-on mower/trimmer. The cuttings are not cleared.
- Swathe cutting: 0.9m wide strips next to rural roads or footways are cut with a tractor and flail. The cuttings are not cleared.
- Visibility cutting: the full width of grassed areas at junctions and bends is cut with a tractor and flail to maintain visibility.

- Conservation Verges: Sites of Special Scientific Interest (SSSI) , Roadside Nature Reserves(RNR) and Bee Roads are cut at the end of the year with a tractor and flail.
- Shrub bed maintenance: the timing of this work depends on location. Beds are weeded and pruned, and self-seeded trees and litter removed.
- Urban hedge cutting: ornamental hedges are cut with a hedge cutter, and weeds, self-seeded trees and litter removed.
- Rural hedge cutting: the side of the hedge which faces towards the highway is cut with a tractor and flail cutter.
- Off-road cycle tracks: vegetation within 0.5m of the route is cut back with hand tools. The cuttings are not cleared.
- Weed spraying: roads, footways and cycle tracks are sprayed with herbicide that kills all green vegetation. Weeds are swept up by the district council.
- Tree planting: the inclusion of sites in the forward works programme is for indicative purposes only, and does not guarantee that these will be delivered. The sites identified will require assessment to determine if tree planting is possible before planting is confirmed. Dependant on the background work required, utilities checks, and resources available, some planting sites may be delayed until subsequent years.

Forward Works Programme

Years One and Two

2022/23 – 2023/24

ALL DISTRICTS								
USRN	Road Name	Road No.	Town/ Village	District	Asset	Description of Works	Extents	Identification
