

## Executive Summary

Canopy cover describes the area covered by a tree or shrub when viewed from above, including the leaves, branches and stem. Canopy cover is a two-dimensional metric, which can be used to quantify the spread of tree cover across an area, this method, however, does not measure understory vegetation. Assessing the spatial extent of a district and establishing a baseline dataset is an important step in the management of our natural environment and can assist planners, policy makers, foresters and communities to recognise the benefits provided by green infrastructure and its importance in community planning, sustainability and resilience. This dataset may be used to target resources to the areas that most need it.

This study estimates tree canopy cover in Kent's Districts using BlueSky data and the i-Tree analysis and assessment tool. Estimates of canopy cover for each ward, as well as each district's total were calculated. The results provide a snapshot of current tree canopy cover and a baseline for comparison with future surveys.

The average canopy cover of Kent and Medway is estimated at **17%** and the canopy cover of the districts are as follows.

District	% Canopy Coverage
Ashford	16.0%
Canterbury	19.5%
Dartford	18.5%
Dover	9.0%
Folkestone and Hythe	8.0%
Gravesham	22.0%
Maidstone	16.0%
Medway	12.0%
Sevenoaks	30.0%
Swale	9.5%
Thanet	4.0%
Tonbridge and Malling	28.0%
Tunbridge Wells	29.0%
<b>Average</b>	<b>17.0%</b>

There was a wide range of canopy cover across Kent and Medway at ward level, ranging from just 1.1% in both North Deal and Romney Marsh to 46% in Pembury. Average canopy cover in Kent and Medway is above the national (8.2%) and regional (11.8%) averages reported in Trees in Towns 2 (2008):

[https://www.researchgate.net/publication/262857090\\_Trees\\_in\\_Towns\\_II\\_A\\_new\\_survey\\_of\\_urban\\_trees\\_in\\_England\\_and\\_their\\_condition\\_and\\_management](https://www.researchgate.net/publication/262857090_Trees_in_Towns_II_A_new_survey_of_urban_trees_in_England_and_their_condition_and_management)

## Background

Kent has more ancient woodland than any other county in the British Isles, holding 22.5% of the ancient woodland across the South East region. Kent also has 11% of England's ancient semi-natural woodland.

[The Kent Biodiversity Strategy 2020 to 2045](#) identified Lowland Beech and Yew Woodland (613 ha existing), Lowland Mixed Broadleaved Woodland (153 ha), Wet woodland (662 ha), Hedgerows (approx. 11,734 km) and Traditional orchard (1,676 ha) amongst its priority habitats, and Juniper (*Juniperus communis*) amongst its priority species, with Kent able to play a key role in their restoration.

The Strategy also sets the following targets relevant to trees and woodland, with an aim to achieve:

- 20.84% high value semi-natural habitat (74,750 ha) well managed for nature (from the 2015 baseline of 14.6% and 54,640 ha).
- An ecological network of semi-natural habitat (high and low value) covering 30% of Kent (112,000 ha) (from the 2015 baseline of 27% and 100,872 ha).
- More, bigger and less fragmented areas of wildlife-rich habitat outside the protected sites network for wildlife, with an increase in the overall extent of all priority habitats to ensure greater connectivity and resilience to climate change.
- New development to better provide for a greener urban environment, through increased urban tree planting, the inclusion of integral wildlife niches and green building and landscape design.
- Protect and restore existing trees, hedgerow and woodland, whilst increasing the county's tree cover with the right trees in the right places, which supports the recovery of wildlife, delivers natural climate solutions and enriches people's lives.
- Restoring 92 hectares and creating 49 hectares of lowland beech and yew woodland habitat by 2025.
- Restoring 30 hectares and creating 16 hectares of lowland mixed broadleaved woodland habitat by 2025.
- Restoring 2,250 kilometres and planting 2,259 kilometres of species-rich hedgerow habitat by 2025.
- Maintaining 39 hectares, restoring 8 hectares and creating 67 hectares of traditional orchard habitat.
- Creating 10 hectares of wet woodland habitat by 2025.

## Future Work

Kent County Council is currently in the process of developing a Natural Climate Solutions analysis report as well as an up to date Kent Tree Strategy, both of which will provide targets for tree planting and expanding woodland and canopy cover across Kent.

## 1. Ashford

Ashford's average canopy cover is **17%** across 58,06 hectares.

As of 2017, 93.9% of land in Ashford is un-developed with the highest proportion used for agriculture. 5.9% of land in Ashford is developed, with the highest proportion used for transport and utilities (see Appendix 4). Percentage canopy cover by ward is as follows:

Ward	% Canopy Coverage
Aylesford & East Stour	7.5%
Beaver	8.3%
Biddenden	23.6%
Bircholt	12.2%
Bockhanger	15.0%
Bybrook	8.7%
Charing	24.4%

## 2. Canterbury

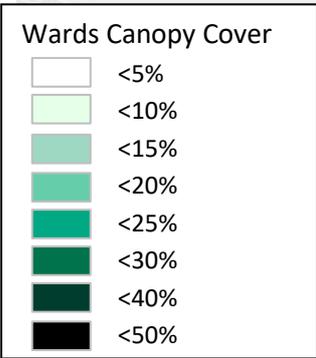

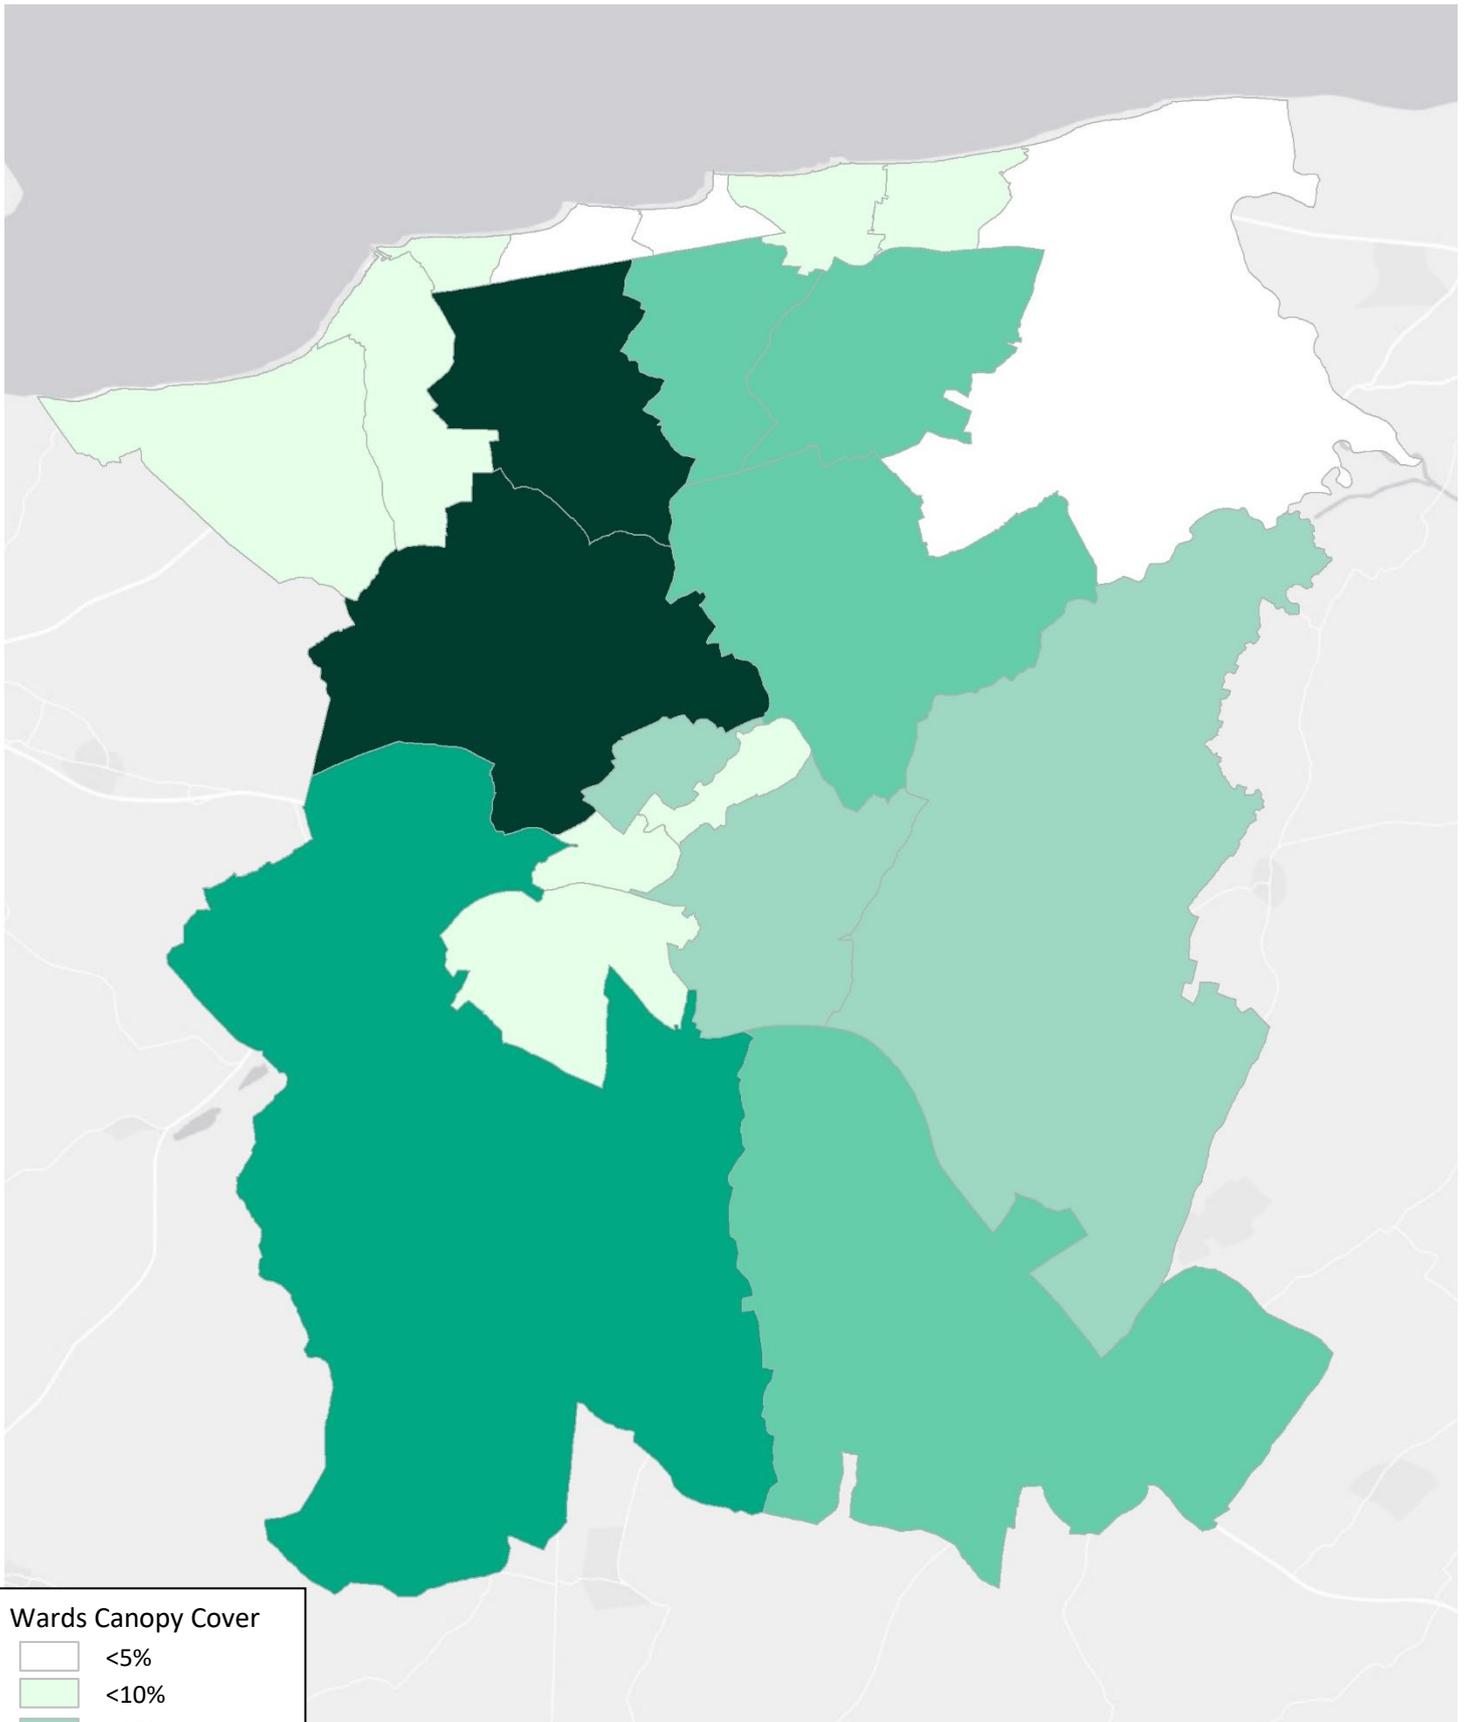

Canterbury's average canopy cover is **19.5%** across 31,858 hectares.

As of 2017, 91.1% of land in Canterbury is un-developed with the highest proportion used for agriculture. 8.9% of land in Canterbury is developed, with the highest proportion used for transport and utilities (see Appendix 4).

Percentage canopy cover by ward is as follows:

Ward	% Canopy Coverage
Barton	13.3%
Beltinge	6.9%
Blean Forest	38.1%
Chartham and Stone Street	27.3%
Chestfield	33.1%
Gorrell	9.0%

**Developed land** is identified as:

- Residential
- Transport and utilities
- Industry and commerce
- Community services
- Minerals and landfill
- Defence buildings
- Unidentified buildings, surface or structure

**Non-developed land** is identified as:

- Agriculture
- Forestry and woodland
- Grassland
- Water
- Outdoor recreation
- Residential gardens
- Undeveloped land in urban areas

**Vacant land** is identified as unclassified land, bounded by hoardings and not yet attributed to an address. It is not possible to define whether the vacant land is of a developed or non-developed land use type.

### Percentage of Developed Land Uses:

	% Residential	% Transport and utilities	% Industry and commerce	% Community services	% Minerals and landfill	% Defence	% Unidentified	% Total
Ashford	0.6%	3.5%	0.2%	0.4%	0.0%	0.0%	1.2%	5.9%
